Handbook: Document History

| | Date | Alterations |
|-----------------|---|--|
| First published | July 1992 | |
| Third edition | 25 May 2007 | |
| Amendment 11 | Published 31 July 2010 Effective 30 September 2010 | pp. 6–8, 11 Preface pp. 17–78, Code Clauses – amended and reformatted pp. 79–104A, References – amended and reprinted pp. 105–148f, Definitions – amended and reprinted pp. 150–158, 161–164, 168–170, 172, 176–178, 181, 184–185 187, 189, 191, 193, 196–199, 201, 204–208, Index |

Note: Page numbers relate to the document at the time of Amendment and may not match page numbers in current document.

Document Status

The most recent version of this document, as detailed in the Document History, is approved by the Chief Executive of the Department of Building and Housing. It is effective from 30 September 2010 and supersedes all previous versions of this document.

People using this document should check for amendments on a regular basis. The Department of Building and Housing may amend any part of any document at any time. Up-to-date versions of documents are available from www.dbh.govt.nz

Preface

1.0 INTRODUCTION

1.1 This preface provides an introduction to building controls in New Zealand. This section shows the relationship between the New Zealand Building Code (the Building Code) and various other Provisions that ensure buildings in New Zealand are safe and healthy to use.

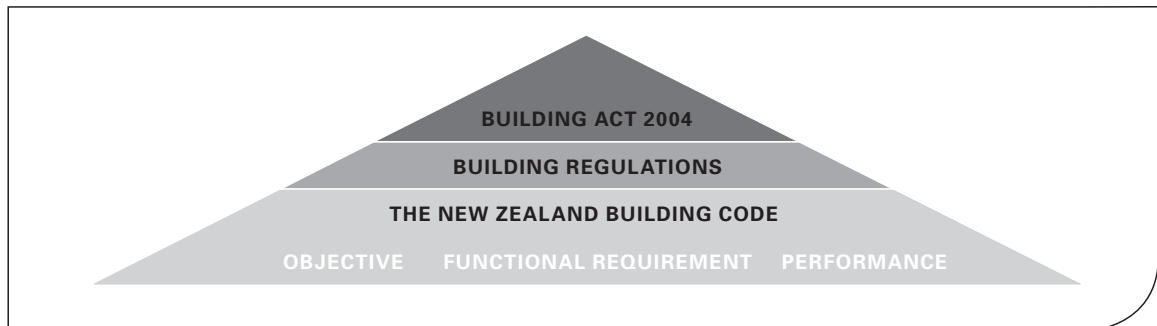

1.2 The preface provides a convenient user reference. However, legal interpretation must be based on the actual wording of the Building Act 2004 (the Building Act), and amendments and respective Building Regulations.

2.0 BUILDING CONTROL FRAMEWORK

The regulation and performance of buildings sits under the following three-part framework.

- The **Building Act**, which contains the provisions for regulating building work.
- The various **Building Regulations**, which contain prescribed forms, list specified systems, define 'change the use' and 'moderate earthquake', and set out the rate of levy and fees for determinations.
- The **Building Code**, contained in Schedule 1 of the Building Regulations 1992, which sets performance standards all new building work must meet, and covers aspects such as stability, fire safety, access, moisture, safety of users, services and facilities, and energy efficiency.

The pyramid below illustrates the legislation that forms the building control framework governed by the Building Act.

2.1 The Building Act 2004

The Building Act provides the mandatory framework for the building control system to be followed when undertaking building work in New Zealand. It applies to all:

- buildings including Crown buildings, except those which may be exempt for reasons of national security
- components in a building, including plumbing, electrical and mechanical installations.

The Building Act should be read taking into account the changes under the Building Amendment Act 2005 and any subsequent amendments (copies are on www.legislation.govt.nz).

2.1.1 Purpose

The Building Act aims to improve control of and encourage better practices in building design and construction to provide greater assurance to consumers.

This means:

- more clarity on the standards we expect buildings to meet
- more guidance on how these standards can be met
- more certainty that capable people are undertaking building design, construction and inspection
- more scrutiny in the building consent and inspection process
- better protection for homeowners through the introduction of mandatory warranties.

The purpose of the Building Act is:

- to provide for regulation of building work
- to ensure that people can use buildings safely without endangering their health
- to ensure people can escape a building in case of fire
- to ensure buildings have attributes that contribute appropriately to the health, physical independence and wellbeing of the people who use them

- to ensure buildings are designed, constructed and able to be used in ways that promote sustainable development.

2.1.2 Principles

The Building Act does not contain an equivalent to section 47 of the Building Act 1991 (the former Act), which contained guidance on how a territorial authority should exercise its powers.

Under section 4 of the Building Act (section 6 under the former Act), principles to be applied in performing functions or duties, or exercising powers under the Building Act, now have greater importance. Section 4 should be taken into account when performing functions, duties or exercising powers relating to the granting of waivers or modifications of the Building Code, and the adoption and review of policies on dangerous, earthquake-prone or insanitary buildings.

The Building Act re-states many of the principles outlined in the former Act, and makes explicit some of the implied principles of that legislation (for example, that innovation is important). However, some significant new concepts have been introduced, including a particular focus on the household unit, as well as considering the whole-of-life costs of building work.

The following is a summary of the Building Act principles.

- Household units have an important role in the lives of the people who use them, and are accorded a special focus.
- The Building Code as it relates to household units is important, and household units need to comply with the Building Code.
- Maintenance requirements of household units need to be reasonable, and owners of household units need to be aware of the maintenance requirements of their household units.
- Harmful effects on human health resulting from the use of building methods, products, design or building work need to be prevented or minimised.

- Buildings need to be durable.
- Special traditional and cultural aspects of the intended use of a building need to be recognised.
- The whole-of-life costs of a building need to be considered.
- Standards are important in achieving compliance with the Building Code for building design and construction.
- Innovation in methods of building design and construction is important.
- People who undertake a rescue operation or firefighting in a building need to be able to expect a reasonable level of protection from injury or illness while doing so.
- The extent and effects of the spread of fire need to be limited to protect other household units and other property.
- Other property needs to be protected from physical damage resulting from the construction, use and demolition of a building.
- People with disabilities need to be able to enter and carry out normal activities and processes in a building.
- Buildings of significant cultural, historical or heritage value need to be preserved.
- Energy use in buildings needs to be efficient.
- The use of renewable sources of energy needs to be encouraged.
- Material use in buildings needs to be efficient and sustainable.
- Water use in buildings needs to be efficient and promote water conservation.
- Waste generated during the construction process needs to be reduced.

2.1.3 Application

The Building Act applies to:

- building construction, alteration, demolition or removal
- maintenance of a building's specified systems, such as lifts and fire protection installations.

The Building Act does not cover:

- planning and resource management
- occupational safety and health.

2.1.4 Structure

The Building Act has five parts.

Part 1: Contains the purpose and principles of the Building Act, together with an overview, commencement dates for various Provisions and definitions. These sections provide an important reference when reading and interpreting the Building Act.

Part 2 (and Schedules 1 and 2): Outlines matters relating to the Building Code and building control (such as building consents), including requirements of building work, requirements for the use of buildings, Provisions for certain categories of buildings and Provisions for the safety of dams.

Part 3: Sets out the functions, duties and powers of the Chief Executive of the Department of Building and Housing (the Department), territorial authorities, regional authorities and building consent authorities. It also deals with the accreditation and registration of building consent authorities, accreditation of dam owners, and product certification.

Part 4 (and Schedule 3): Covers matters relating to the licensing and disciplining of building practitioners.

Part 5 (and Schedule 4): Describes miscellaneous matters, including offences and criminal proceedings, implied terms of contracts, regulation-making powers, amendments to other enactments and the repeal of the former Act, and the transitional Provisions from the former Act to the Building Act.

2.2 Building Regulations

Building Regulations are made under and in accordance with the Building Act.

A number of regulations have been made under the Building Act. Currently (as at May 2007) there are seven sets of regulations.

1. **Building Regulations 1992**, made under the former Act and which include the Building Code. These regulations have been amended by the Building (Forms) Regulations 2004 so that only certain parts remain in force. Parts still in force are: Schedule 1 (Building Code), Regulation 3, Forms 16 & 17 (and Regulation 4 and Schedule 2 where they relate to these forms).
2. **Building (Forms) Regulations 2004**, as amended by the Building (Forms) Amendment Regulations 2005, which prescribes forms to be used under the Building Act.
3. **Building (Specified Systems, Change the Use, and Earthquake-prone Buildings) Regulations 2005**, as amended by the Building (Specified Systems, Change the Use, and Earthquake-Prone Buildings) Amendment Regulations 2005. These regulations outline and define the following terms.
 - Specified systems – the building systems that must be listed on compliance schedules and are subject to specific inspection and maintenance procedures. Schedule 1 provides the list of specified systems.
 - Change the use – to determine when a change in a building's use will require upgrading to meet certain requirements of the Building Act. Schedule 2 determines the use of all or parts of buildings.
 - Moderate earthquake – to define a moderate earthquake in relation to a building.
4. **Building (Fee for Determinations) Regulations 2005**
5. **Building Levy Order 2005**

6. **Building (Accreditation of Building Consent Authorities) Regulations 2006**
7. **Building (Consent Authority Accreditation Fees) Regulations 2007**
8. **Building (Designation of Building work Licence Classes) Order 2007**
9. **Building (Design Work Declared to be Building Work) Order 2007**
10. **Building Practitioners (Licensing Fees and Levy) Regulations 2007**
11. **Building (Registration of Building Consent Authorities) Regulations 2007**
12. **Building (Infringement Offences, Fees, and Forms) Regulations 2007**
13. **Building Practitioners (Register of Licensed Building Practitioners) Regulations 2008**
14. **Building (Dam Safety) Regulations 2008**
15. **Building Practitioners (Complaints and Disciplinary Procedures) Regulations 2008**
16. **Building (Product Certification) Regulations 2008**
17. **Building (Building Consent Authority Transition) Order 2008**
18. **Building (National Multiple-use Approval) Regulations 2009**
19. **Building (Minor Variations) Regulations 2009**
20. **Building (Designation of Building Work Licensing Classes) Order 2010**
21. **Building Practitioners (Licensing Fees and Levy) Regulations 2010**
22. **Building Practitioners (Register of Licensed Building Practitioners) Regulations 2010**

Note: these regulations can be found at www.legislation.govt.nz

2.3 The New Zealand Building Code

The Building Code is contained in Schedule 1 of the Building Regulations 1992. The Building Code contains compulsory rules for all new building work.

Amend 11
Sep 2010

2.3.1 Content

The Building Code sets out performance criteria that building work must meet. It covers aspects such as structural stability, fire safety, access, moisture control, durability, services and facilities, and energy efficiency.

The Building Code does not prescribe how work should be done, but states how completed building work and its parts must perform.

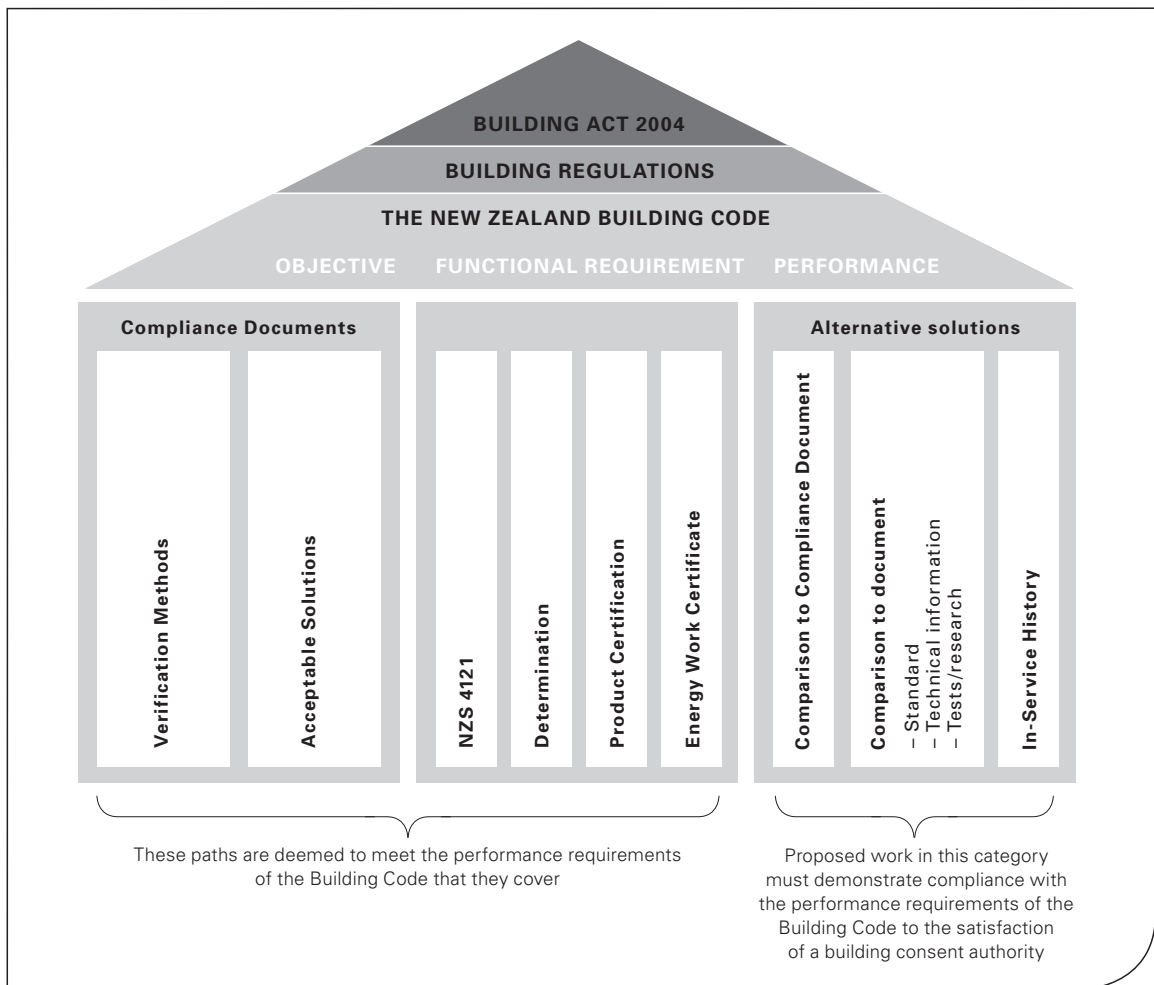

An advantage of a performance-based Building Code is flexibility. It contains no prescriptive requirements stipulating that certain products or designs must be used. This flexibility allows developments and innovation in building design, technology and systems.

2.3.2 Structure

The Building Code consists of two preliminary clauses and 35 technical clauses. Each technical clause has three levels that describe the requirements for the clause and is listed below.

1. **Objective** Social objectives the building must achieve.
2. **Functional requirement** Functions the building must perform to meet the Objective.
3. **Performance** The performance criteria the building must achieve. By meeting the performance criteria, the Objective and Functional requirement can be achieved.

Amend 11
Sep 2010

3.0 COMPLIANCE PATHS

Compliance with the Building Code can be demonstrated using various pathways. Understanding the New Zealand building control framework will help a building consent applicant decide which path is most suitable when designing and constructing building work.

The diagram below illustrates the hierarchy of New Zealand building controls, including the various compliance paths.

The top three tiers of the pyramid (the Building Act and Building Regulations) show mandatory building legislation that must be followed, as explained in the previous section.

The rest of the diagram shows various paths that may be used to demonstrate compliance with the Building Code. Compliance with the Building Code must be demonstrated using one or more of the paths. The applicant can choose which path(s) to follow.

With the exception of **alternative solutions**, the paths illustrated on the previous page must be accepted by the building consent authority as meeting the performance requirements of the Building Code. These pathways are discussed below.

3.1 Compliance Documents

Compliance Documents provide details for construction that, if followed, result in compliance with the Building Code. They are published by the Department. (Note: Compliance Documents were previously known as Approved Documents, and were published by the former Building Industry Authority.)

A design that complies with Compliance Documents must be accepted by a building consent authority as complying with the Building Code.

There is one Compliance Document for each of the 35 technical clauses in the Building Code. Each Compliance Document contains at least a Verification Method or an Acceptable Solution, and usually has both. However, some Compliance Documents have more than one Verification Method or Acceptable Solution.

For example, the Compliance Document for Clause B1 of the Building Code has two Verification Methods and three Acceptable Solutions.

Verification Methods and Acceptable Solutions are usually referred to by their Building Code clauses and unique identification numbers. Some examples are listed below.

- The Acceptable Solutions for Clause E2 **External Moisture** are known as **E2/AS1** and **E2/AS2**.
- The Acceptable Solution for Clause G4 **Ventilation** is known as **G4/AS1**.
- The Acceptable Solution for Clause G1 **Personal Hygiene** is known as **G1/AS1**.
- The Verification Methods for Clause B1 **Structure** are known as **B1/VM1** and **B1/VM4**.

Amend 11
Sep 2010

Amend 11
Sep 2010

3.1.1 Verification Methods

Verification Methods are tests or calculation methods that prescribe one way to comply with the Building Code. Verification Methods can include:

- calculation methods: using recognised analytical methods and mathematical models
- laboratory tests: using tests (sometimes to destruction) on prototype components and systems
- tests-in-situ: which may involve examination of plans and verification by test, where compliance with specified numbers, dimensions or locations is required (non-destructive tests, such as pipe pressure tests, are also included).

3.1.2 Acceptable Solutions

These are simple step-by-step instructions that show one way to comply with the Building Code.

3.2 Product certification

The Building Act contains provisions for a voluntary product certification scheme that will enable product manufacturers to have their products certified as meeting nominated Performance requirements of the Building Code.

Building products or methods that are used in accordance with a product certificate as provided by section 269 of the Building Act must be accepted as complying with the Building Code.

3.3 Energy work certificate

Energy work is defined as gasfitting work or prescribed electrical work. An energy work certificate certifies that energy work complies with either the Electricity Act 1992 or the Gas Act 1992.

An energy work certificate must be accepted as establishing compliance with the relevant Performance requirements of the Building Code.

3.4 New Zealand Standard NZS 4121

Section 119 of the Building Act specifies that NZS 4121, the code of practice for design for access and use of buildings by persons with disabilities (and any modification of that Standard), is to be taken as a Compliance Document.

3.5 Determinations

A determination is a binding decision made by the Department. It provides a way of solving disputes or answering questions relating to the Building Code and territorial authority/building consent authority/regional authority decisions under the Building Act.

A range of matters can be determined, including:

- whether a building or building work complies with the Building Code
- a building consent authority's decision on a building consent, a notice to fix, a code compliance certificate (CCC) or a compliance schedule
- a territorial authority's decision to issue a building consent subject to a waiver or modification
- a territorial authority's decision on a certificate of acceptance, a compliance schedule, a notice to fix, or a certificate for public use
- a regional authority's or territorial authority's exercise or failure to exercise its powers under the Building Act.

3.6 Alternative solutions

An alternative solution is a building solution that differs, in part or wholly, from the solutions offered by the Compliance Documents (an Acceptable Solution or Verification Method), but achieves compliance with the performance requirements of the Building Code to the satisfaction of the building consent authority.

There may be a number of reasons for the use of an alternative solution.

- There may not be a Compliance Document for the proposed construction, for example, if no Compliance Document is available for on-site effluent disposal.
- The building work may incorporate unusual design features that fall outside the scope of a Compliance Document.

Whatever the reason for using an alternative solution, the Building Code, being performance-based, allows for innovation and applicants have the freedom to propose an innovative solution. Refer to 2.3 'The New Zealand Building Code'.

3.7 Producer statements

A producer statement is a statement supplied by or on behalf of an applicant for a building consent, or by or on behalf of a person who has been granted a building consent. It is a statement that certain work will be, or has been, carried out in accordance with certain technical specifications.

Producer statements were introduced by the former Act and are no longer expressly referred to in the Building Act. A building consent authority may, at their discretion, accept and consider a producer statement as part of the plans or specifications for a building consent. This will assist the building consent authority in deciding whether it is satisfied on reasonable grounds the provisions of the Building Code will be met if the building work is completed in accordance with the plans and specifications. A building consent authority should have a formal procedure or policy in place for the use and consideration of producer statements, especially if a producer statement(s) will be required to prove building work complies with a building consent.

4.0 THE PARTIES AND THEIR RESPONSIBILITIES

Five principal parties are responsible for ensuring that buildings are safe and sanitary in line with the Building Act.

4.1 The Department of Building and Housing (the Department)

The Department has a range of statutory responsibilities for building and housing, and administers New Zealand's building legislation. The Department's building control functions include:

- advising the Minister for Building and Construction on matters relating to building control
- administering and reviewing the Building Code
- producing and maintaining Compliance Documents that specify prescriptive methods as a means of complying with the Building Code
- providing information, guidance, and advice on building controls to all sectors of the building industry and consumers
- implementing, administering and monitoring a system of regulatory controls for a vibrant sector with skilled building professionals
- making determinations, or technical rulings, on matters of interpretation, doubt or dispute.

4.2 Territorial authorities

Territorial authorities are responsible for enforcing the Building Act, Regulations and the Building Code in their areas of jurisdiction.

They are responsible for:

- gaining accreditation as a building consent authority
- registering as a building consent authority
- performing the functions of a building consent authority

- issuing project information memoranda
- granting waivers or modifications of the Building Code (not including waivers or modifications relating to access and facilities for people with disabilities)
- issuing certificates of acceptance
- issuing certificates for public use
- determining the extent to which buildings must comply with the Building Code if they are altered, or their use is changed or where there is a specified intended life change
- enforcing the provisions relating to annual building warrants of fitness
- issuing certain notices provided for under the Building Act
- keeping records
- ensuring dangerous, insanitary and earthquake prone buildings are identified and appropriate action taken to remove any danger or insanitary condition
- amending compliance schedules
- carrying out other functions and duties specified in the Building Act.

4.3 Building consent authorities

Building consent authorities are responsible for:

- issuing building consents
- inspecting building work for which they granted a building consent
- issuing notices to fix
- issuing code compliance certificates
- issuing compliance schedules and amending them where the specified systems are affected by building work
- carrying out other functions and duties specified in the Building Act.

4.4 Regional authorities

Regional authorities are responsible for:

- performing the functions of a building consent authority to the extent that those functions relate to dams
- considering and approving dam classifications
- considering and approving dam safety assurance programmes
- administering the Building Act, relating to dam classifications, dam safety assurance programmes and dam compliance certificates
- enforcing provisions of the Building Code and the Building Act and regulations that relate to dams
- adopting a policy on dangerous dams.

4.5 Building owners

Building owners are responsible for:

- detailing work proposals on plans and specifications, including proposals for the inspection and routine maintenance of the specified systems for the purposes of the compliance schedule (if applicable)
- applying for building consents (and amendments to building consents) and project information memoranda
- constructing buildings in accordance with the 'approved plans and specifications'
- organising inspections at given stages as building work progresses
- collecting energy work certificates
- applying for a code compliance certificate as soon as any work carried out under a building consent granted to them is completed
- maintaining buildings in a safe and sanitary manner
- ensuring any specified systems in their building are performing and will continue

to perform to the performance standards

- supplying the annual building warrant of fitness, if applicable
- notifying the territorial authority if a change of use, extension of life, or subdivision is proposed
- paying any fees as required by the Building Act.

4.6 Licensed building practitioners

The Building Act set up a licensed building practitioners (LBP) scheme to promote, recognise and support professional skills and behaviour in the building industry. The scheme has seven licence classes covering designers, site supervisors and trades people, such as carpenters, roofers, plasterers and bricklayers.

To become licensed, building practitioners must show they meet the standard for the licence class appropriate for them. Details of LBPs are held on a public register at www.dbh.govt.nz/lbp-register

Once licensed, LBPs are responsible for notifying territorial authorities of breaches of building consents.

From March 2012, it is expected that restricted building work on houses and small-medium sized apartment buildings will only be able to be carried out or supervised by LBPs.

Restricted building work is design and building work that is critical to the integrity of a house or small-medium sized apartment building. It will cover aspects of the primary structure, external moisture management and fire design.

From March 2012:

- any plans and specifications containing restricted building work (relating to design work) must be accompanied by a memorandum issued by the LBP who carried out or supervised the design work, stating that the design work complies with the Building Code

- if an application for a building consent relates to restricted building work, the names of the LBPs carrying out or supervising that work must be given to the building consent authority in the application (if known) or once the work commences, or when the application for the code compliance certificate is made.

The most up-to-date information on the LBP scheme is at www.dbh.govt.nz/lbp

Amend 11
Sep 2010

4.7 Past building control parties

4.7.1 The Building Industry Authority

The Building Industry Authority (the Authority) was a Crown entity, established under the former Act as the sole regulatory authority for building controls in New Zealand. The introduction of the Building Act 2004 has seen the dissolution of the Authority and transfer of its responsibilities to the Department.

4.7.2 Building certifier

A building certifier was a person approved by the Authority under the former Act to issue building certificates with respect to specific provisions of the Building Code. A building certifier may have been employed by a building owner as an alternative to using the territorial authority for checking technical proposals and performing inspections. Building certifiers are not provided for under the Building Act except for certain transitional arrangements.

5.0 BUILDING COMPLIANCE PROVISIONS

5.1 Project information memoranda (sections 31 to 39)

A project information memorandum (PIM) provides information known to the territorial authority/regional authority about land, and requirements of the Building Act and other Acts that might be relevant to proposed building work. A PIM is specific to the site and project.

A PIM is a legal document and may have a notice attached to it requiring the owner to obtain other approvals or consents required by other legislation, such as the Resource

Management Act 1991, prior to any work commencing on the project. For example, a PIM might include the fact that the height of a building may contravene a rule in the District Plan, meaning that before work commences, a separate resource consent is required from the territorial authority planning unit.

An application for a building consent is deemed to include an application for a PIM, unless one has been previously issued for the project and this is supplied with the building consent application. In most cases, PIMs and building consents are applied for in a single application. They will be processed as separate applications, but may be issued separately or jointly.

If the application for a PIM affects a registered historic place, historic area, wahi tapu, or wahi tapu area, and a PIM has not been issued for the building work to which the application applies, then the territorial authority must notify the New Zealand Historic Places Trust within five days after receiving the application.

If the territorial authority considers a development contribution under the Local Government Act 2002 is payable by the owner, it may attach a notice (Form 3) that advises the applicant that a code compliance certificate will not be issued until the development contribution is paid.

5.2 Building consents (sections 40 to 52)

A building consent is the formal approval, under section 49 of the Building Act, permitting an applicant to undertake building work in accordance with the plans and specifications approved by the building consent authority. Building work is the construction, alteration, demolition or removal of a building and includes sitework.

A person cannot carry out building work except in accordance with a building consent. There are some exemptions (see sections 41 and 43 and Schedule 1 of the Building Act), but section 17 still requires building work to be carried out in accordance with the Building Code, even if no building consent is required.

5.2.1 Alterations (Section 112)

Where proposed building work involves an alteration to an existing building, the consent must not be granted unless the building consent authority is satisfied that all new building work complies with the Building Code and:

- the altered building will comply as nearly as is reasonably practicable with the Building Code provisions for means of escape from fire and access and facilities for people with disabilities, and
- the altered building will continue to comply with the other provisions of the Building Code to at least the same extent as before the alteration.

However, a territorial authority may allow the alteration of an existing building without complying with provisions of the Building Code specified by the territorial authority, if the territorial authority is satisfied that:

- if the building were required to comply with the relevant provisions of the Building Code, the alterations would not take place, and
- the alteration will result in improvements to attributes of the building that relate to means of escape from fire or access and facilities for persons with disabilities, and
- the improvements mentioned above outweigh any detriment that is likely to arise as a result of the building not complying with the relevant provisions of the Building Code.

5.2.2 Change of use (sections 114 and 115)

Uses of buildings are defined in Schedule 2 of the Building (Specified Systems, Change the Use, and Earthquake-Prone Buildings) Regulations 2005.

A change of use arises when two criteria are met. The first criterion is that a building's use must change from one use in Schedule 2 to a different use in Schedule 2. The second criterion is the result of that change (first criterion) means the requirements for compliance with the Building Code for the new use are additional to, or more onerous than, the requirements for the old use.

See Regulations 5 and 6 of the Building (Specified Systems, Change the Use, and Earthquake-Prone Buildings) Regulations 2005.

An owner of a building must give written notice to the territorial authority/regional authority if they propose to change the use of a building.

Where the owner proposes to change the use of a building to one or more household units, where household units did not exist before, they must obtain written notice from the territorial authority. This must state that the territorial authority is satisfied, on reasonable grounds, that the building, in its new use, will comply as nearly as is reasonably practicable, with the Building Code in all respects (usually through the issue of a building consent).

For any other change of use proposal, the owner must get written notice from the territorial authority/regional authority, stating that the authority is satisfied, on reasonable grounds, that the building, in its new use, will comply, as nearly as is reasonably practicable, with every provision of the Building Code that relates to either or both of the following matters:

- means of escape from fire, protection of other property, sanitary facilities, structural performance, and fire-rating performance
- access and facilities for people with disabilities (if this is a requirement under section 118 of the Building Act).

The territorial authority/regional authority must also be satisfied that the building will continue to comply with the other provisions of the Building Code to at least the same extent as before the change of use.

5.2.3 Extension of life (sections 114 and 116)

Where a building with a specified intended life is issued with a building consent that is subject to the condition that the building be altered before the end of its life, an 'extension of life' can be obtained.

An owner of a building must give written notice to the territorial authority/regional authority if it proposes to extend the life of a building.

The territorial authority/regional authority can only give its consent to the extension of life if it is satisfied that:

- the building has been altered in accordance with the original condition
- the alteration complies with section 112 of the Building Act (Alterations).

5.2.4 Subdivision (sections 114 and 116A)

An owner of a building must give written notice to the territorial authority if it proposes to subdivide land in a manner that affects a building.

The territorial authority can only issue a certificate under section 224(f) (relating to cross lease, company lease, and unit titles) of the Resource Management Act 1991 for the purpose of giving effect to a subdivision affecting a building or part of a building, if it is satisfied that the building will comply as nearly as reasonably practicable with every provision of the Building Code that relates to one or more of the following.

- Means of escape from fire
- Access and facilities for people with disabilities
- Protection of other property

The building must also continue to comply with other provisions of the Building Code to at least the same extent as it did before the application for subdivision was made.

5.2.5 Access for persons with disabilities (sections 117 to 120 and Schedule 2)

Any building (including parts of a building such as a driveway) that is open to the public, whether or not they are charged for entry, must have reasonable and adequate provision for access, parking and sanitary facilities for people with disabilities who may be expected to work or visit that building and carry out normal activities and processes in that building.

The most recent version of NZS 4121 Code of Practice for Design for Access and Use of Buildings by Persons with Disabilities is to be taken as a Compliance Document.

5.3 Code compliance certificate (sections 91 to 95)

A code compliance certificate (CCC) is a formal statement, issued under section 95 of the Building Act, which states that building work carried out under a building consent application complies with that building consent. A CCC provides assurance to the owner and subsequent property owners that the approved plans and specifications have been followed.

A CCC is not issued until all building work has been completed as per the plans and specifications submitted with the building consent application.

A CCC must be applied for after all building work carried out under a building consent granted to the owner is completed.

An application for a CCC where the building work was carried out under a consent granted under the former Act must be considered and determined as if the Building Act had not been passed. However, section 43(2) of the former Act must be read as if a CCC may only be issued if the territorial authority is satisfied that the building work complies with the Building Code that applied at the time the building consent was granted.

5.4 Certificates of acceptance (sections 96 to 99)

Certificates of acceptance were introduced by the Building Act. The certificate confirms that, to the extent an inspection was able to be carried out, the building work complies with the Building Code. A certificate of acceptance therefore has some similarities to a CCC in that it will provide some verification for a building owner, or future building owner, that all or part of the work is compliant.

A certificate of acceptance can be obtained in situations where:

- work has been done without a building consent when one should have been obtained
- a building consent authority or building certifier is unable or refuses to issue a CCC
- verification is required of urgent building work carried out under section 42 of the Building Act.

A certificate of acceptance can also be used in limited circumstances in relation to section 363B.

A certificate of acceptance is based on verification with the Building Code that was in place **at the time of application**. It is not based on what was in place at the time a building consent was granted, or should have been applied for, or when the work was actually carried out.

5.5 Notices to fix (sections 163 to 168)

A notice to fix is a statutory notice requiring a person to remedy a breach of the Building Act or Regulations under the Act. A notice to fix can be issued for all breaches of the Building Act, including non-complying building work, and for an incorrect building warrant of fitness or a compliance schedule that is not being properly complied with. A notice to fix can state that all or any building work must cease immediately.

A building consent authority, regional authority or a territorial authority must issue a notice to fix for any contravention of the Building Act and Building Regulations under section 164 of the Building Act. When a notice to fix has been issued by a building consent authority that is not a territorial authority or a regional authority, the matter is then handed to the territorial authority or regional authority to decide whether the notice has been complied with.

Some examples of where notices could be issued include:

- carrying out building work other than in accordance with a building consent
- displaying an incorrect building warrant of fitness
- changing the use of a building without notifying the territorial authority or regional authority.

5.6 Compliance schedules (sections 100 to 107)

A compliance schedule lists specified systems within a building. The compliance schedule for a building must identify which specified systems are present, the performance standards for those systems, and how those systems will be inspected and maintained to ensure they continue to function.

For more information on compliance schedules, see the Compliance Schedule Handbook.

5.7 Building warrants of fitness (sections 108 to 111)

A building warrant of fitness (BWoF) is a statement supplied by a building owner, to the territorial authority confirming that the systems specified in the compliance schedule for their building have been maintained and checked in accordance with the compliance schedule for the previous 12 months, and will continue to perform as required. For more information on building warrants of fitness, see the Compliance Schedule Handbook.

5.8 Certificates for public use (section 363A)

A certificate for public use is a new safety provision under the Building Act. It is a tool that can be used to certify that premises or parts of premises affected by building work are safe to be used by the public. Certificates for public use can only be used where a building consent has been granted for the building work but no CCC has yet been issued. Certificates for public use do not relieve the owner of a building from the obligation to apply for a CCC after all the building work has been carried out.

5.9 Building certificate

A building certificate was a formal confirmation by a building certifier that specific aspects of a building would or do comply with the Building Code. A territorial authority was obliged to accept such a certificate. Building certificates were allowed for under the former Act, but are only included under the new Building Act as transitional allowances to phase them out.

A General Provisions

CLAUSE A1—CLASSIFIED USES

1.0 EXPLANATION

1.0.1 For the purposes of this building code *buildings* are classified according to type, under seven categories.

1.0.2 A *building* with a given classified use may have one or more intended uses as defined in the Act.

2.0 HOUSING

2.0.1 Applies to *buildings* or use where there is self care and service (internal management). There are three types:

2.0.2 Detached Dwellings

Applies to a *building* or use where a group of people live as a single household or family. Examples: a holiday cottage, boarding house accommodating fewer than 6 people, dwelling or hut.

2.0.3 Multi-unit Dwelling

Applies to a *building* or use which contains more than one separate household or family. Examples: an attached dwelling, flat or multi-unit apartment.

2.0.4 Group Dwelling

Applies to a *building* or use where groups of people live as one large extended family. Examples: within a commune or marae.

3.0 COMMUNAL RESIDENTIAL

3.0.1 Applies to *buildings* or use where assistance or care is extended to the *principal users*. There are two types:

3.0.2 Community Service

Applies to a residential *building* or use where limited assistance or care is extended to the *principal users*. Examples: a boarding house, hall of residence, holiday cabin, [*backcountry hut*,] hostel, hotel, motel, nurses' home, retirement village, time-share accommodation, a work camp, or camping ground.

3.0.3 Community Care

Applies to a residential *building* or use where a large degree of assistance or care is extended to the *principal users*. There are two types:

(a) **Unrestrained**; where the *principal users* are free to come and go. Examples: a hospital, an old people's home or a health camp.

(b) **Restrained**; where the *principal users* are legally or physically constrained in their movements. Examples: a borstal or drug rehabilitation centre, an old people's home where substantial care is extended, a prison or hospital.

4.0 COMMUNAL NON-RESIDENTIAL

4.0.1 Applies to a *building* or use being a meeting place for people where care and service is provided by people other than the *principal users*. There are two types:

4.0.2 Assembly Service

Applies to a *building* or use where limited care and service is provided. Examples: a church, cinema, clubroom, hall, museum, public swimming pool, stadium, theatre, or whare runanga (the assembly house).

Schedule 1 clause A1 3.0.2: amended, on 31 October 2008, by regulation 4 of the Building (Building Code: Backcountry Huts) Amendment Regulations 2008 (SR 2008/358).

CLAUSE A1—CLASSIFIED USES (continued)**4.0.3 Assembly Care**

Applies to a *building* or use where a large degree of care and service is provided. Examples: an [early childhood education and care centre], college, day care institution, centre for handicapped persons, kindergarten, school or university.

5.0 COMMERCIAL

5.0.1 Applies to a *building* or use in which any natural resources, goods, services or money are either developed, sold, exchanged or stored. Examples: an amusement park, auction room, bank, car-park, catering facility, coffee bar, computer centre, fire station, funeral parlour, hairdresser, library, office (commercial or government), police station, post office, public laundry, radio station, restaurant, service station, shop, showroom, storage facility, television station or transport terminal.

6.0 INDUSTRIAL

6.0.1 Applies to a *building* or use where people use material and physical effort to:

- (a) extract or convert natural resources,
- (b) produce goods or energy from natural or converted resources,
- (c) repair goods, or
- (d) store goods (ensuing from the industrial process).

Examples: an agricultural building, agricultural processing facility, aircraft hanger, factory, power station, sewage treatment works, warehouse or utility.

7.0 OUTBUILDINGS

7.0.1 Applies to a *building* or use which may be included within each classified use but are not intended for human habitation, and are accessory to the principal use of associated *buildings*. Examples: a carport, farm *building*, garage, greenhouse, machinery room, private swimming pool, public toilet, or shed.

8.0 ANCILLARY

8.0.1 Applies to a *building* or use not for human habitation and which may be exempted from some amenity provisions, but which are required to comply with structural and safety-related aspects of the *building code*. Examples: a bridge, derrick, fence, free standing outdoor fireplace, jetty, mast, path, platform, pylon, retaining wall, tank, tunnel or dam.

Schedule 1 clause A1 4.0.3: amended, on 1 December 2008, by section 60(2) of the Education Amendment Act 2006 (2006 No 19).

CLAUSE A2—INTERPRETATION

This Clause of the New Zealand Building Code lists defined words used within the Code.

Those definitions, plus defined word or terms used in the Compliance Documents, are included in the section on definitions in this Handbook.

B Stability

CLAUSE B1—STRUCTURE

Provisions

OBJECTIVE

B1.1 The objective of this provision is to:

- (a) Safeguard people from injury caused by structural failure,
- (b) Safeguard people from loss of *amenity* caused by structural behaviour, and
- (c) Protect other property from physical damage caused by structural failure.

FUNCTIONAL REQUIREMENT

B1.2 *Buildings, building elements and sitework* shall withstand the combination of loads that they are likely to experience during *construction or alteration* and throughout their lives.

PERFORMANCE

B1.3.1 *Buildings, building elements and sitework* shall have a low probability of rupturing, becoming unstable, losing equilibrium, or collapsing during *construction or alteration* and throughout their lives.

B1.3.2 *Buildings, building elements and sitework* shall have a low probability of causing loss of *amenity* through undue deformation, vibratory response, degradation, or other physical characteristics throughout their lives, or during *construction or alteration* when the *building* is in use.

B1.3.3 Account shall be taken of all physical conditions likely to affect the stability of *buildings, building elements and sitework*, including:

- (a) Self-weight,
- (b) Imposed gravity loads arising from use,
- (c) Temperature,
- (d) Earth pressure,
- (e) Water and other liquids,
- (f) Earthquake,
- (g) Snow,
- (h) Wind,
- (i) *Fire*,

Limits on application

CLAUSE B1—STRUCTURE (continued)**Provisions**

- (j) Impact,
- (k) Explosion,
- (l) Reversing or fluctuating effects,
- (m) Differential movement,
- (n) Vegetation,
- (o) Adverse effects due to insufficient separation from other *buildings*,
- (p) Influence of equipment, services, non-structural elements and contents,
- (q) Time dependent effects including creep and shrinkage, and
- (r) Removal of support.

B1.3.4 Due allowance shall be made for:

- (a) The consequences of failure,
- (b) The intended use of the *building*,
- (c) Effects of uncertainties resulting from *construction* activities, or the sequence in which *construction* activities occur,
- (d) Variation in the properties of materials and the characteristics of the site, and
- (e) Accuracy limitations inherent in the methods used to predict the stability of *buildings*.

B1.3.5 The demolition of *buildings* shall be carried out in a way that avoids the likelihood of premature collapse.

B1.3.6 *Sitework*, where necessary, shall be carried out to:

- (a) Provide stability for *construction* on the site, and
- (b) Avoid the likelihood of damage to *other property*.

B1.3.7 Any *sitework* and associated supports shall take account of the effects of:

- (a) Changes in ground water level,
- (b) Water, weather and vegetation, and
- (c) Ground loss and slumping.

Limits on application

CLAUSE B2—DURABILITY**Provisions****OBJECTIVE**

B2.1 The objective of this provision is to ensure that a *building* will throughout its life continue to satisfy the other objectives of this code.

FUNCTIONAL REQUIREMENT

B2.2 *Building* materials, components and *construction* methods shall be sufficiently durable to ensure that the *building*, without reconstruction or major renovation, satisfies the other functional requirements of this code throughout the life of the *building*.

PERFORMANCE

B2.3.1 *Building elements* must, with only normal maintenance, continue to satisfy the performance requirements of this code for the lesser of the *specified intended life* of the *building*, if stated, or:

(a) The life of the *building*, being not less than 50 years, if:

(i) Those *building elements* (including floors, walls, and fixings) provide structural stability to the *building*, or

(ii) Those *building elements* are difficult to access or replace, or

(iii) Failure of those *building elements* to comply with the *building code* would go undetected during both normal use and maintenance of the building

(b) 15 years if:

(i) Those *building elements* (including the *building* envelope, exposed plumbing in the subfloor space, and in-built chimneys and flues) are moderately difficult to access or replace, or

(ii) Failure of those *building elements* to comply with the *building code* would go undetected during normal use of the *building*, but would be easily detected during normal maintenance.

Limits on application

Performance B2.3.1 applies from the time of issue of the applicable *code compliance certificate*. *Building elements* are not required to satisfy a durability performance which exceeds the *specified intended life* of the *building*

Clause B2.3 Schedule was substituted, as from 11 September 1997, by regulation 2 Building Amendment Regulations 1997 (SR 1997/156).

CLAUSE B2—DURABILITY (continued)**Provisions**

(c) 5 years if:

(i) The *building elements* (including services, linings, renewable protective coatings, and *fixtures*) are easy to access and replace, and

(ii) Failure of those *building elements* to comply with the *building code* would be easily detected during normal use of the *building*.

B2.3.2 Individual *building elements* which are components of a *building system* and are difficult to access or replace must either:

(a) All have the same durability, or

(b) Be installed in a manner that permits the replacement of *building elements* of lesser durability without removing *building elements* that have greater durability and are not specifically designed for removal and replacement.

Limits on application

C Fire Safety

CLAUSE C1—OUTBREAK OF FIRE

Provisions

OBJECTIVE

C1.1 The objective of this provision is to safeguard people from injury or illness caused by *fire*.

FUNCTIONAL REQUIREMENT

C1.2 In *buildings* fixed appliances using the controlled combustion of solid, liquid or gaseous fuel, shall be installed in a way which reduces the likelihood of *fire*.

PERFORMANCE

C1.3.1 Fixed appliances and services shall be installed so as to avoid the accumulation of gases within the installation and in *building* spaces, where heat or ignition could cause uncontrolled combustion or explosion.

C1.3.2 Fixed appliances shall be installed in a manner that does not raise the temperature of any *building element* by heat transfer or concentration to a level that would adversely affect its physical or mechanical properties or function

Limits on application

CLAUSE C2—MEANS OF ESCAPE**Provisions****OBJECTIVE**

C2.1 The objective of this provision is to:

- (a) Safeguard people from injury or illness from a *fire* while escaping to a *safe place*, and
- (b) Facilitate *fire* rescue operations.

FUNCTIONAL REQUIREMENT

C2.2 *Buildings* shall be provided with [*means of escape from fire*] which:

- (a) Give people *adequate* time to reach a *safe place* without being overcome by the effects of *fire*, and
- (b) Give fire service personnel *adequate* time to undertake rescue operations.

PERFORMANCE

C2.3.1 The number of *open paths* available to each person escaping to an *exitway* or *final exit* shall be appropriate to:

- (a) The *travel distance*.
- (b) The number of occupants,
- (c) The *fire hazard*, and
- (d) The *fire safety systems* installed in the *firecell*.

C2.3.2 The number of *exitways* or *final exits* available to each person shall be appropriate to:

- (a) The *open path travel distance*,
- (b) The *building height*,
- (c) The number of occupants,
- (d) The *fire hazard*, and
- (e) The *fire safety systems* installed in the *building*.

C2.3.3 *Escape routes* shall be:

- (a) Of *adequate* size for the number of occupants,
- (b) Free of obstruction in the direction of escape,

Limits on application

[Performance C2.3.3(b) must not prevent a door that forms part of an *escape route* from being locked if the person who locks it is satisfied that no one is in that part of the *building* served by the *escape route* and that no one is likely to enter that part of the *building*, except in an emergency, without unlocking that door.]

Clause C2.2 was amended, as from 3 January 2002, by regulation 3(1) Building Amendment Regulations 2001 (SR 2001/374), by substituting the words “means of escape from fire” for the words “escape routes”.

Clause C2.3.3(b) was amended, as from 3 January 2002, by regulation 3(2) Building Amendment Regulations 2001 (SR 2001/374), by inserting, adjacent to clause C2.3.3(b) in the column headed “Limits on application”, the words “Performance C2.3.3(b) must not prevent a door that forms part of an escape route from being locked if the person who locks it is satisfied that no one is in that part of the building served by the escape route and that no one is likely to enter that part of the building, except in an emergency, without unlocking that door.”

CLAUSE C2—MEANS OF ESCAPE (continued)**Provisions**

- (c) Of length appropriate to the mobility of the people using them,
- (d) Resistant to the spread of *fire* as required by Clause C3 “Spread of Fire”,
- (e) Easy to find as required by Clause F8 “Signs”,
- [(f) Provided with systems for visibility during failure of the main lighting, as required by Clause F6 “Visibility in *escape routes*”, and]
- (g) Easy and safe to use as required by Clause D1.3.3 “Access Routes”.

Limits on application

Clause C2.3.3(f) was substituted, as from 21 June 2007, by regulation 6(3) Building Amendment Regulations 2007 (SR 2007/124).

CLAUSE C3—SPREAD OF FIRE**Provisions****OBJECTIVE**

C3.1 The objective of this provision is to:

- (a) Safeguard people from injury or illness when evacuating a *building* during *fire*.
- (b) Provide protection to fire service personnel during firefighting operations.
- (c) Protect adjacent *household units*[, *other residential units*,] and *other property* from the effects of *fire*.
- (d) Safeguard the environment from adverse effects of *fire*.

FUNCTIONAL REQUIREMENT

C3.2 *Buildings* shall be provided with safeguards against *fire* spread so that:

- (a) Occupants have time to escape to a *safe place* without being overcome by the effects of *fire*,
- (b) Firefighters may undertake rescue operations and protect property,
- (c) Adjacent *household units*[, *other residential units*,] and *other property* are protected from damage, and
- (d) Significant quantities of *hazardous substances* are not released to the environment during *fire*.

PERFORMANCE

C3.3.1 Interior surface finishes on walls, floors, ceilings and suspended *building elements*, shall resist the spread of *fire* and limit the generation of toxic gases, smoke and heat, to a degree appropriate to:

- (a) The *travel distance*,
- (b) The number of occupants,
- (c) The *fire hazard*, and
- (d) The active *fire safety systems* installed in the *building*.

Limits on application

Requirement C3.2(d) applies only to *buildings* where significant quantities of *hazardous substances* are stored or processed.

Clause C3.1(c) was amended, as from 3 January 2002, by regulation 3(3) Building Amendment Regulations 2001 (SR 2001/374), by inserting after the words “household units”, the words “, other residential units,”.

CLAUSE C3—SPREAD OF FIRE (continued)**Provisions**

C3.3.2 *Fire separations* shall be provided within *buildings* to avoid the spread of *fire* and smoke to:

- (a) Other *firecells*,
- (b) Spaces intended for sleeping, and

(c) *Household units* within the same *building* or *adjacent buildings*.

[(d) *other property*.]

C3.3.3 *Fire separations* shall:

- (a) Where openings occur, be provided with *fire resisting closures* to maintain the *integrity* of the *fire separations* for an *adequate* time, and
- (b) Where penetrations occur, maintain the *fire resistance rating* of the *fire separation*.

C3.3.4 *Concealed spaces* and cavities within *buildings* shall be sealed and subdivided where necessary to inhibit the unseen spread of *fire* and smoke.

C3.3.5 *External walls* and roofs shall have resistance to the spread of *fire*, appropriate to the *fire load* within the *building* and to the proximity of other *household units*[, *other residential units*,] and *other property*.

C3.3.6 Automatic *fire* suppression systems shall be installed where people would otherwise be:

- (a) Unlikely to reach a safe place in *adequate* time because of the number of storeys in the *building*,
- (b) Required to remain within the *building* without proceeding directly to a *final exit*, or where the *evacuation time* is excessive,
- (c) Unlikely to reach a *safe place* due to confinement under institutional care because of mental or physical disability, illness or legal detention, and the *evacuation time* is excessive, or
- (d) At high risk due to the *fire load* and *fire hazard* within the *building*.

Limits on application

[Performance C3.3.2(b) does not apply to *Detached Dwellings* or within *household units* of *Multi-unit Dwellings*.]

Performance C3.3.4 shall not apply to *Detached Dwellings*.

Clause C3.2(c) was amended, as from 3 January 2002, by regulation 3(4) Building Amendment Regulations 2001 (SR 2001/374), by inserting after the words "household units", the words ", other residential units,".

Clause C3.3.2 was amended, as from 3 January 2002, by regulation 3(5) Building Amendment Regulations 2001 (SR 2001/374), by adding the following paragraph: "(d) other property." and repealing, adjacent to clause C3.3.2 in the column headed "Limits on application", the words "Performance C3.3.2 shall not apply to Detached Dwellings, or within household units of Multi-unit Dwellings." and inserting, adjacent to clause C3.3.2(b) in the column headed "Limits on application", the words "Performance C3.3.2(b) does not apply to Detached Dwellings or within household units of Multi-unit Dwellings."

Clause C3.3.5 was amended, as from 3 January 2002, by regulation 3(6) Building Amendment Regulations 2001 (SR 2001/374), by inserting after the words "household units", the words ", other residential units,".

CLAUSE C3—SPREAD OF FIRE (continued)**Provisions**

C3.3.7 Air conditioning and mechanical ventilation systems shall be constructed to avoid circulation of smoke and *fire* between *firecells*.

C3.3.8 Where an automatic smoke control system is installed, it shall be constructed to:

- (a) Avoid the spread of *fire* and smoke between *firecells*, and
- (b) Protect *escape routes* from smoke until the occupants have reached a *safe place*.

C3.3.9 The *fire safety systems* installed shall facilitate the specific needs of fire service personnel to:

- (a) Carry out rescue operations, and
- (b) Control the spread of *fire*.

C3.3.10 Environmental protection systems shall ensure a low probability of *hazardous substances* being released to:

- (a) Soils, vegetation or natural waters,
- (b) The atmosphere, and
- (c) *Sewers* or public *drains*.

Limits on application

[Performance C3.3.9 does not apply to *backcountry huts*.]

Performance C3.3.10 applies only to *buildings* where significant quantities of *hazardous substances* are stored or processed.

Schedule 1 clause C3.3.9: amended, on 31 October 2008, by regulation 6 of the Building (Building Code: Backcountry Huts) Amendment Regulations 2008 (SR 2008/358).

CLAUSE C4—STRUCTURAL STABILITY DURING FIRE**Provisions****OBJECTIVE**

C4.1 The objective of this provision is to:

- (a) Safeguard people from injury due to loss of structural stability during *fire*, and
- (b) Protect *household units* and *other property* from damage due to structural instability caused by *fire*.

FUNCTIONAL REQUIREMENT

C4.2 *Buildings* shall be constructed to maintain structural stability during *fire* to:

- (a) Allow people *adequate* time to evacuate safely,
- (b) Allow fire service personnel *adequate* time to undertake rescue and firefighting operations, and
- (c) Avoid collapse and consequential damage to adjacent *household units* or *other property*.

PERFORMANCE

C4.3.1 Structural elements of *buildings* shall have *fire* resistance appropriate to the function of the elements, the *fire load*, the *fire intensity*, the *fire hazard*, the height of the *buildings* and the *fire* control facilities external to and within them.

C4.3.2 Structural elements shall have a *fire* resistance of no less than that of any element to which they provide support within the same *firecell*.

C4.3.3 Collapse of elements having lesser *fire* resistance shall not cause the consequential collapse of elements required to have a higher *fire* resistance.

Limits on application

D Access

CLAUSE D1—ACCESS ROUTES

Provisions

OBJECTIVE

D1.1 The objective of this provision is:

- (a) Safeguard people from injury during movement into, within and out of *buildings*,
- (b) Safeguard people from injury resulting from the movement of vehicles into, within and out of *buildings*, and
- (c) Ensure that *people with disabilities* are able to enter and carry out normal activities and functions within *buildings*.

FUNCTIONAL REQUIREMENT

D1.2.1 *Buildings* shall be provided with reasonable and adequate access to enable safe and easy movement of people.

D1.2.2 Where a *building* is provided with loading or parking spaces, they shall be constructed to permit safe and easy unloading and movement of vehicles, and to avoid conflict between vehicles and pedestrians.

PERFORMANCE

D1.3.1 *Access routes* shall enable people to:

- (a) Safely and easily approach the main entrance of *buildings* from the apron or construction edge of a *building*,
- (b) Enter *buildings*,
- (c) Move into spaces within *buildings* by such means as corridors, doors, stairs, ramps and lifts,
- (d) Manoeuvre and park cars, and
- (e) Manoeuvre and park delivery vehicles required to use the loading space.

D1.3.2 At least one *access route* shall have features to enable *people with disabilities* to:

- (a) Approach the *building* from the street boundary or, where required to be provided, the *building* car park,
- (b) Have access to the internal space served by the principal access, and
- (c) Have access to and within those spaces where they may be expected to work or visit, or which contain facilities for personal hygiene as required by Clause G1 "Personal Hygiene".

Limits on application

Objective D1.1(c) shall apply only to those *buildings* to which [section 47A of the Act] applies.

Requirement D1.2.1 shall not apply to *Ancillary buildings* or *Outbuildings*.

Performance D1.3.2 shall not apply to *Housing*, *Outbuildings*, [*backcountry huts*,] *Ancillary buildings*, and to *Industrial buildings* where no more than 10 people are employed.

Note: Section 47A is in the Building Act 1991. The equivalent section in the Building Act 2004 is section 118.

The limits on application to clause D1.1(c) were amended consequential on the Health Reforms (Transitional Provisions) Act 1993, as from 29 December 2000, by regulation 4(1) Building Amendment Regulations 2000 (SR 2000/119), by substituting the expression "section 47A of the Act" for the expression "section 25 of the Disabled Persons Community Welfare Act 1975".

Schedule 1 clause D1.3.2: amended, on 31 October 2008, by regulation 7 of the Building (Building Code: Backcountry Huts) Amendment Regulations 2008 (SR 2008/358).

CLAUSE D1—ACCESS ROUTES (continued)**Provisions****D1.3.3** Access routes shall:

- (a) Have *adequate* activity space,
- (b) Be free from dangerous obstructions and from any projections likely to cause an obstruction,
- (c) Have a safe cross fall, and safe slope in the direction of travel,
- (d) Have *adequate* slip-resistant walking surfaces under all conditions of normal use,
- (e) Include stairs to allow access to upper floors irrespective of whether an escalator or lift has been provided,
- (f) Have stair treads, and ladder treads or rungs which:
 - (i) provide *adequate* footing, and
 - (ii) have uniform rise within each flight and for consecutive flights,
- (g) Have stair treads with a leading edge that can be easily seen,
- (h) Have stair treads which prevent children falling through or becoming held fast between treads, where open risers are used,
- (i) Not contain isolated steps,
- (j) Have smooth, reachable and graspable *handrails* to provide support and to assist with movement along a stair or ladder,
- (k) Have *handrails* of *adequate* strength and rigidity as required by Clause B1 "Structure",
- (l) Have landings of appropriate dimensions and at appropriate intervals along a stair or ramp to prevent undue fatigue,
- (m) Have landings of appropriate dimensions where a door opens from or onto a stair, ramp or ladder so that the door does not create a hazard, and
- (n) Have any automatically controlled doors constructed to avoid the risk of people becoming caught or being struck by moving parts.

Limits on application

Performance D1.3.3(h) shall not apply within *Industrial buildings*, *Outbuildings* and *Ancillary buildings*.

Performance D1.3.3(i) shall not apply with *Detached Dwellings* or within *household units* of *Multi-unit Dwellings*, or to *Outbuildings* and *Ancillary buildings*.

Performance D1.3.3(j) shall not apply to isolated steps.

CLAUSE D1—ACCESS ROUTES (continued)**Provisions**

D1.3.4 An *accessible route*, in addition to the requirement of Clause D1.3.3, shall:

- (a) Be easy to find, as required by Clause F8 “Signs”,
- (b) Have *adequate* activity space to enable a person in a wheelchair to negotiate the route while permitting an ambulant person to pass,
- (c) Include a lift complying with Clause D2 “Mechanical Installations for Access” to upper floors where:
 - (i) *buildings* are four or more storeys high,
 - (ii) *buildings* are three storeys high and have a total design occupancy of 50 or more persons on the two upper floors,
 - (iii) *buildings* are two storeys high and have a total design occupancy of 40 or more persons on the upper floor, or
 - (iv) an upper floor, irrespective of design occupancy, is to be used for the purposes of public reception areas of banks, central, regional and local government offices and facilities, hospitals, medical and dental surgeries and medical, paramedical and other primary health care centres,
- (d) Contain no thresholds or upstands forming a barrier to an unaided wheelchair user,
- (e) Have means to prevent the wheel of a wheelchair dropping over the side of the *accessible route*,
- (f) Have doors and related hardware which are easily used,
- (g) Not include spiral stairs, or stairs having open risers,
- (h) Have stair treads with leading edge which is rounded, and
- (i) Have *handrails* on both sides of the *accessible route* when the slope of the route exceeds 1 in 20. The *handrails* shall be continuous along both sides of the stair, ramp and landing except where the *handrail* is interrupted by a doorway.

Limits on application

CLAUSE D1—ACCESS ROUTES (continued)**Provisions**

D1.3.5 Vehicle spaces and circulation routes shall have:

- (a) Dimensions appropriate to the *intended use*,
- (b) Appropriate crossfall, and slope in the direction of travel,
- (c) *Adequate* queuing and circulation space, and
- (d) *Adequate* sight distances.

D1.3.6 Vehicle spaces for use by *people with disabilities*, shall, in addition to the requirements of Clause D1.3.5, be:

- (a) Provided in sufficient numbers,
- (b) Located to avoid conflict between vehicles and people using or moving to or from the space, and
- (c) Easy to find as required by Clause F8 Signs.

Limits on application

CLAUSE D2—MECHANICAL INSTALLATIONS FOR ACCESS**Provisions****OBJECTIVE**

D2.1 The objective of this provision is to:

- (a) Safeguard people from injury and loss of amenity while using mechanical installations for movement into, within and out of *buildings*,
- (b) Safeguard maintenance personnel from injury while servicing mechanical installations for access, and
- (c) Ensure that *people with disabilities* are able to carry out normal activities and processes within *buildings*.

FUNCTIONAL REQUIREMENT

D2.2 Mechanical installations for access into, within and out of *buildings* shall provide for the safe and easy movement of people, and for the safety of maintenance personnel.

PERFORMANCE

D2.3.1 Mechanical installations for access shall:

- (a) Move people safely, and stop and hold as required for the normal use of the installation, for all loads up to and including 25% in excess of the rated load,
- (b) Not produce excessive acceleration or deceleration,
- (c) Be constructed to avoid the likelihood of people falling, tripping, becoming caught, being able to touch or be struck by moving parts, sharp edges or projections, under both normal and reasonably foreseeable abnormal conditions of use,
- (d) Be constructed to prevent collision between components, or between components and the *building*,
- (e) Have a control system that ensures safe abnormal operation in the event of overloading or failure of any single component, and
- (f) Be capable of being isolated for inspection, testing and maintenance.

Limits on application

Objective D2.1(c) shall apply only to those *buildings* to which [section 47A of the Act] applies.

Note: Section 47A is in the Building Act 1991. The equivalent section in the Building Act 2004 is section 118.

The limits on application to clause D2.1(c) were amended consequential on the Health Reforms (Transitional Provisions) Act 1993, as from 29 December 2000, by regulation 4(1) Building Amendment Regulations 2000 (SR 2000/119), by substituting the expression “section 47A of the Act” for the expression “section 25 of the Disabled Persons Community Welfare Act 1975”.

CLAUSE D2—MECHANICAL INSTALLATIONS FOR ACCESS (continued)**Provisions**

D2.3.2 Mechanical installations for access shall be provided with:

- (a) *Adequate* control over normal use, to ensure people's safety throughout any operation involving starting, stopping or changing the direction of travel,
- (b) Notification of position, where people are fully enclosed and the installation serves more than two levels,
- (c) *Adequate* lighting and ventilation for both normal and emergency use, and
- (d) Signs as required by Clause F8 "Signs",

D2.3.3 Mechanical installations for access shall, for emergency purposes, be provided with a means of:

- (a) Calling outside help,
- (b) Releasing people safely,
- (c) Safeguarding people from exposure to *hazardous* situations, and
- (d) Allowing authorised personnel to override the normal running procedure and take exclusive control of the installation.

D2.3.4 Potentially dangerous equipment shall be located in spaces which:

- (a) Are secure from unauthorised entry and contain only equipment associated with the installation,
- (b) Are appropriately sized and suitably guarded to provide *adequate* safe working areas for maintenance personnel,
- (c) Are provided with *adequate* power and lighting for maintenance, and
- (d) Have an environment that ensures the safe operation of the equipment under all likely conditions of use.

Limits on application

Performance D2.3.3(d) shall not apply to installations travelling less than 15m vertically.

CLAUSE D2—MECHANICAL INSTALLATIONS FOR ACCESS (continued)**Provisions**

D2.3.5 Mechanical installations on *accessible routes* shall:

- (a) Where the passenger conveyor is manually controlled, provide:
- (i) controls which are easily identifiable and easy to use,
 - (ii) *adequate* notification that the passenger conveyor has registered a summoning call, and
 - (iii) *adequate* notification that the passenger conveyor has arrived, and of its future direction of travel,
- (b) Where the passenger conveyor is fully enclosed and serves more than two levels, provide an *adequate* means of informing occupants of their location,
- (c) Where appropriate, have doors which:
- (i) are power operated,
 - (ii) are readily distinguishable from their surroundings, and
 - (iii) where automatic, remain open sufficiently long to enable *people with disabilities* to pass through, and
- (d) Have *handrails* within the passenger conveyor.

Limits on application

E Moisture

CLAUSE E1—SURFACE WATER

Provisions

OBJECTIVE

E1.1 The objective of this provision is to:

- (a) Safeguard people from injury or illness, and *other property* from damage, caused by *surface water*, and
- (b) Protect the *outfalls* of drainage systems.

FUNCTIONAL REQUIREMENT

E1.2 *Buildings* and *sitework* shall be constructed in a way that protects people and *other property* from the adverse effects of *surface water*.

PERFORMANCE

E1.3.1 [Except as otherwise required under the Resource Management Act 1991 for the protection of other property, *surface water*], resulting from [an event] having a 10% probability of occurring annually and which is collected or concentrated by *buildings* or *sitework*, shall be disposed of in a way that avoids the likelihood of damage or nuisance to *other property*.

E1.3.2 *Surface water*, resulting from [an event] having a 2% probability of occurring annually, shall not enter *buildings*.

E1.3.3 Drainage systems for the disposal of *surface water* shall be constructed to:

- (a) Convey *surface water* to an appropriate *outfall* using gravity flow where possible,
- (b) Avoid the likelihood of blockages,
- (c) Avoid the likelihood of leakage, penetration by roots, or the entry of ground water where pipes or lined channels are used,
- (d) Provide reasonable access for maintenance and clearing blockages,
- (e) Avoid the likelihood of damage to any *outfall*, in a manner acceptable to the *network utility operator*, and
- (f) Avoid the likelihood of damage from superimposed loads or normal ground movements.

Limits on application

Performance E1.3.2 shall apply only to *Housing, Communal Residential* and *Communal Non-residential buildings*.

Clause E1.3.1 was amended, as from 22 December 1994, by regulation 3(2)(e) and (f) Building Regulations 1992, Amendment No 1 (SR 1994/263) by substituting the words “Except as otherwise required under the Resource Management Act 1991 for the protection of other property, surface water” for the words “Surface water”.

Clause E1.3.1 was amended, as from 3 January 2002, by regulation 3(7) Building Amendment Regulations 2001 (SR 2001/374), by substituting the words “an event” for the words “a storm”.

Clause E1.3.2 was amended, as from 3 January 2002, by regulation 3(8) Building Amendment Regulations 2001 (SR 2001/374), by substituting the words “an event” for the words “a storm”.

[CLAUSE E2—EXTERNAL MOISTURE**Provisions****OBJECTIVE**

E2.1 The objective of this provision is to safeguard people from illness or injury that could result from external moisture entering the *building*.

FUNCTIONAL REQUIREMENT

E2.2 *Buildings* must be constructed to provide adequate resistance to penetration by, and the accumulation of, moisture from the outside.

PERFORMANCE

E2.3.1 Roofs must shed precipitated moisture. In locations subject to snowfalls, roofs must also shed melted snow.

E2.3.2 Roofs and exterior walls must prevent the penetration of water that could cause undue dampness, damage to *building elements*, or both.

E2.3.3 Walls, floors, and structural elements in contact with, or in close proximity to, the ground must not absorb or transmit moisture in quantities that could cause undue dampness, damage to *building elements*, or both.

E2.3.4 *Building elements* susceptible to damage must be protected from the adverse effects of moisture entering the space below suspended floors.

E2.3.5 *Concealed spaces* and cavities in *buildings* must be constructed in a way that prevents external moisture being accumulated or transferred and causing condensation, fungal growth, or the degradation of *building elements*.

E2.3.6 Excess moisture present at the completion of *construction* must be capable of being dissipated without permanent damage to *building elements*.

Limits on application

Requirement E2.2 does not apply to *buildings* (for example, certain bus shelters, and certain *buildings* used for horticulture or for equipment for washing motor vehicles automatically) if moisture from the outside penetrating them, or accumulating within them, or both, is unlikely to impair significantly all or any of their *amenity*, durability, and stability.

Clause E2 was substituted, as from 21 June 2007, by regulation 4 Building Amendment Regulations 2007 (SR 2007/124).

[CLAUSE E2—EXTERNAL MOISTURE (continued)**Provisions**

E2.3.7 *Building elements* must be constructed in a way that makes due allowance for the following:

- (a) the consequences of failure:
- (b) the effects of uncertainties resulting from *construction* or from the sequence in which different aspects of *construction* occur:
- (c) variation in the properties of materials and in the characteristics of the site.

Limits on application

[CLAUSE E3—INTERNAL MOISTURE**Provisions****OBJECTIVE**

E3.1 The objective of this provision is to—

- (a) Safeguard people against illness, injury, or loss of *amenity* that could result from accumulation of internal moisture; and
- (b) Protect *household units* and other property from damage caused by free water from another *household unit* in the same *building*.

FUNCTIONAL REQUIREMENT

E3.2 *Buildings* must be constructed to avoid the likelihood of—

- (a) Fungal growth or the accumulation of contaminants on linings and other building elements; and
- (b) Free water overflow penetrating to an adjoining *household unit*; and
- (c) Damage to *building elements* caused by the presence of moisture.

PERFORMANCE

E3.3.1 An *adequate* combination of *thermal resistance*, ventilation, and space temperature must be provided to all *habitable spaces*, bathrooms, laundries, and other spaces where moisture may be generated or may accumulate.

E3.3.2 *Freewater* from accidental overflow from *sanitary fixtures* or *sanitary appliances* must be disposed of in a way that avoids loss of *amenity* or damage to household units or *other property*.

E3.3.3 Floor surfaces of any space containing *sanitary fixtures* or *sanitary appliances* must be *impervious* and easily cleaned.

E3.3.4 Wall surfaces adjacent to *sanitary fixtures* or *sanitary appliances* must be *impervious* and easily cleaned.

E3.3.5 Surfaces of *building elements* likely to be splashed or become contaminated in the course of the *intended use* of the *building*, must be *impervious* and easily cleaned.

E3.3.6 Surfaces of *building elements* likely to be splashed must be constructed in a way that prevents water splash from penetrating behind linings or into *concealed spaces*.

Limits on application

Performance E3.3.1 does not apply to *Communal Non-residential, Commercial, Industrial, Outbuildings, or Ancillary buildings*.

Clause E3 was substituted, as from 14 October 2004, by regulation 3 Building Amendment Regulations 2004 (SR 2004/317).

F Safety of Users

CLAUSE F1—HAZARDOUS AGENTS ON SITE

Provisions

OBJECTIVE

F1.1 The objective of this provision is to safeguard people from injury or illness caused by *hazardous agents* or *contaminants* on a site.

FUNCTIONAL REQUIREMENT

F1.2 *Buildings* shall be constructed to avoid the likelihood of people within the *building* being adversely affected by *hazardous agents* or *contaminants* on the site.

PERFORMANCE

F1.3.1 Sites shall be assessed to determine the presence and potential threat of any *hazardous agents* or *contaminants*.

F1.3.2 The likely effect of any *hazardous agent* or *contaminant* on people shall be determined taking account of:

- (a) The *intended use* of the *building*,
- (b) The nature, potency or toxicity of the *hazardous agent* or *contaminant*, and,
- (c) The protection afforded by the *building* envelope and *building* systems.

Limits on application

CLAUSE F2—HAZARDOUS BUILDING MATERIALS**Provisions****OBJECTIVE**

F2.1 The objective of this provision is to safeguard people from injury and illness caused by exposure to *hazardous building materials*.

FUNCTIONAL REQUIREMENT

F2.2 *Building materials* which are potentially *hazardous*, shall be used in ways that avoid undue risk to people.

PERFORMANCE

F2.3.1 The quantities of gas, liquid, radiation or solid particles emitted by materials used in the *construction of buildings*, shall not give rise to harmful concentrations at the surface of the material where the material is exposed, or in the atmosphere of any space.

F2.3.2 Transparent panels capable of being mistaken for an unimpeded path of travel shall be marked to make them visible.

F2.3.3 Glass or other brittle materials with which people are likely to come into contact shall:

- (a) If broken on impact, break in a way which is unlikely to cause injury, or
- (b) Resist a reasonably foreseeable impact without breaking, or
- (c) Be protected from impact.

Limits on application

Performance F2.3.2 does not apply to *Housing*

CLAUSE F3—HAZARDOUS SUBSTANCES AND PROCESSES**Provisions****OBJECTIVE**

F3.1 The objective of this provision is to safeguard people from injury or illness, and *other property* from damage, caused by *hazardous substances* or processes in *buildings*.

FUNCTIONAL REQUIREMENT

F3.2 *Buildings* where *hazardous substances* are stored and hazardous processes undertaken, shall be constructed to provide *adequate* protection to people and to *other property*.

PERFORMANCE

F3.3 Spaces in *buildings* where *hazardous substances* are stored, handled or used, or where hazardous processes are undertaken, shall be located and constructed to protect people, and *other property*, under both normal and reasonably foreseeable abnormal conditions, and shall be provided with:

- (a) Means of restricting unauthorised access,
- (b) Means of preventing *hazardous substances*, or other materials unacceptable to the *network utility operator*, from entering *sewers* or public *drains*,
- (c) Means of allowing the harmless release of pressure where there is a significant risk of explosion occurring,
- (d) Protected ignition sources where flammable or explosive goods are stored,
- (e) Means of rendering harmless by ventilation, containment, dilution, or chemical or biological action, any radioactive, toxic or flammable vapours, gases or materials which may escape from pipes, vessels or containers,
- (f) Impervious, easily cleaned surface finishes on *building elements* likely to be splashed or become contaminated in the course of the *intended use* of the *building*, and
- (g) Signs as required by Clause F8 “Signs”.

Limits on application

CLAUSE F4—SAFETY FROM FALLING**Provisions****OBJECTIVE**

F4.1 The objective of this provision is to safeguard people from injury caused by falling.

FUNCTIONAL REQUIREMENT

F4.2 *Buildings* shall be constructed to reduce the likelihood of accidental fall.

PERFORMANCE

F4.3.1 Where people could fall 1 metre or more from an opening in the external envelope or floor of a *building*, or from a sudden change of level within or associated with a *building*, a barrier shall be provided.

F4.3.2 Roofs with permanent access shall have barriers provided.

F4.3.3 Swimming pools having a depth of water exceeding 400mm, shall [have barriers provided].

F4.3.4 Barriers shall:

- (a) Be continuous and extend for the full extent of the hazard,
- (b) Be of appropriate height,
- (c) Be constructed with *adequate* rigidity,
- (d) Be of *adequate* strength to withstand the foreseeable impact of people and, where appropriate, the static pressure of people pressing against them,
- (e) Be constructed to prevent people from falling through them, and
- [(f) In the case of a swimming pool, restrict the access of children under 6 years of age to the pool or the immediate pool area.]

[(g) Restrict the passage of children under 6 years of age when provided to guard a change of level in areas likely to be frequented by them.]

Limits on application

Performance F4.3.1 shall not apply where such a barrier would be incompatible with the *intended use* of an area, or to temporary barriers on *construction* sites where the possible fall is less than 3 metres [, or to *buildings* providing pedestrian access in remote locations where the route served presents similar natural hazards].

Performance F4.3.3 shall not apply to any pool exempted under section 5 of the Fencing of Swimming Pools Act 1987.

[Performance F4.3.4(f) shall not apply to any pool exempted under section 5 of the Fencing of Swimming Pools Act 1987.]

Clause F4.3.1 was amended, as from 3 January 2002, by regulation 3(9) Building Amendment Regulations 2001 (SR 2001/374), by adding, to the entry adjacent to clause F4.3.1 in the column headed "Limits on application", the words "", or to buildings providing pedestrian access in remote locations where the route served presents similar natural hazards".

Clause F4.3.3 was amended, as from 22 December 1994, by regulation 5(1) Buildings Regulations 1992, Amendment No 1 (SR 1994/263) by substituting the words "have barriers provided" for the words "be constructed with a barrier to restrict access to the pool or the immediate pool area, by children under 6 years of age".

Clause F4.3.4 was amended, as from 22 December 1994, by regulation 5(2) Buildings Regulations 1992, Amendment No 1 (SR 1994/263) by substituting para (f), inserting the text opposite para (f), and inserting para (g).

Clause F4.3.4(h) was inserted, as from 21 June 2007, by regulation 5 Building Amendment Regulations 2007 (SR 2007/124).

CLAUSE F4—SAFETY FROM FALLING (continued)**Provisions**

[(h) Be constructed so that they are not readily able to be used as seats.]

F4.3.5 Barriers to swimming pools shall have in addition to performance F4.3.4:

[(a) All gates and doors fitted with latching devices not readily operated by children, and constructed to automatically close and latch when released from any stationary position 150mm or more from the closed and secured position, but excluding sliding and sliding-folding doors that give access to the immediate pool surround from a *building* that forms part of the barrier, and]

(b) No permanent objects on the outside of the barrier that could provide a climbing step.

Limits on application

[Performance F4.3.4(h) does not apply to *Housing*.]

Clause F4.3.5 was amended, as from 22 December 1994, by regulation 5(3) Buildings Regulations 1992, Amendment No 1 (SR 1994/263) by substituting para (a).

CLAUSE F5—CONSTRUCTION AND DEMOLITION HAZARDS

| Provisions | Limits on application |
|--|-----------------------|
| <p>OBJECTIVE</p> <p>F5.1 The objective of this provision is to safeguard people from injury, and <i>other property</i> from damage, caused by <i>construction</i> or demolition site hazards.</p> <p>FUNCTIONAL REQUIREMENT</p> <p>[F5.2] <i>Construction</i> and demolition work on buildings shall be performed in a manner that avoids the likelihood of:</p> <ul style="list-style-type: none"> (a) Objects falling onto people on or off the site, (b) Objects falling on property off the site, (c) Other hazards arising on the site affecting people off the site and <i>other property</i>, and (d) Unauthorised entry of children to hazards on the site. <p>PERFORMANCE</p> <p>F5.3.1 Suitable <i>construction</i> methods shall be used to avoid the likelihood of tools or materials falling onto places where people might be present.</p> <p>F5.3.2 Where <i>construction</i> or demolition work presents a hazard in places to which the public has access, barriers shall be provided and shall:</p> <ul style="list-style-type: none"> (a) Be of appropriate height and <i>construction</i> to prevent site hazards from harming traffic or passersby, (b) Be difficult to climb, (c) Have no opening other than those approved by the <i>territorial authority</i> for access and viewing, (d) Have no gates or doors which project beyond the site when opened, (e) Contain no projection that would be a hazard to traffic or people, and (f) Be clearly marked where the barrier itself may otherwise present a hazard to traffic or passersby. | |

Clause F5 was amended, as from 22 December 1994, by regulation 6 Buildings Regulations 1992, Amendment No 1 (SR 1994/263) by substituting the expression “F5.2” for the expression “F5” immediately under the heading “FUNCTIONAL REQUIREMENT”.

CLAUSE F5—CONSTRUCTION AND DEMOLITION HAZARDS (continued)**Provisions**

F5.3.3 Where a *construction* or demolition site contains any hazard which might be expected to attract the unauthorised entry of children, the hazard shall be enclosed to restrict access by children.

F5.3.4 Suitable barriers shall be constructed to provide a safe route for people where lifting equipment creates a risk of accident from objects falling on a place of public access, or where a similar risk results from the height at which *construction* or demolition work is being carried out.

Limits on application

[CLAUSE F6—VISIBILITY IN ESCAPE ROUTES**Provisions****OBJECTIVE**

F6.1 The objective of this provision is to help safeguard people from injury in *escape routes* during failure of the main lighting.

FUNCTIONAL REQUIREMENT

F6.2 *Specified features* in *escape routes* must be made *reasonably visible* by lighting systems, other systems, or both, during failure of the main lighting.

PERFORMANCE

F6.3.1 *Specified features* in *escape routes* must, when the systems for visibility are at their design level, be *reasonably visible*.

F6.3.2 The systems for visibility must operate to the following percentages of their design levels within the following times after failure of the main lighting:

- (a) 80% in 0.5 seconds in locations (examples of which are given by performance F6.3.3) where there is a high risk of injury due to delay in operation of the systems for visibility; and
- (b) 10% in 0.5 seconds, and 80% in 30 seconds, in stairs and in locations that are unfamiliar to users; and
- (c) 10% in 20 seconds, and 80% in 60 seconds, in all other locations.

Limits on application

Requirement F6.2 does not apply to *Detached Dwellings*, *household units* within *Multi-unit Dwellings*, *Outbuildings*, *[[backcountry huts,]]* or *Ancillary buildings*.

Performance F6.3.1 does not apply to *specified features* in the initial 20 metres of an *escape route* if the risk of injury, or impediment to movement of people, due to the *specified features* not being visible is low (for example, because people are familiar with the *escape route*, the *escape route* is level, and people do not require assistance to escape).

Schedule 1 clause F6.2: amended, on 31 October 2008, by regulation 8 of the Building (Building Code: Backcountry Huts) Amendment Regulations 2008 (SR 2008/358).

Clause F6.2 was amended, as from 22 December 1994, by regulation 7(1) Buildings Regulations 1992, Amendment No 1 (SR 1994/263) by substituting the word "Ancillary" for the word "Ancilliary".

Clause F6.3.1 was amended, as from 22 December 1994, by regulation 7(2) Buildings Regulations 1992, Amendment No 1 (SR 1994/263) by inserting the words "or 30 minutes, whichever is the greater".

Clause F6 was substituted, as from 21 June 2007, by regulation 6(1) Building Amendment Regulations 2007 (SR 2007/124).

[CLAUSE F6—VISIBILITY IN ESCAPE ROUTES (continued)]**Provisions**

F6.3.3 Examples of locations (referred to in performance F6.3.2(a)) where there is a high risk of injury due to delay in operation of the systems for visibility include:

- (a) areas where dangerous machinery is installed:
- (b) areas where hazardous processes take place:
- (c) clinical areas of hospitals:
- (d) prisons and other *buildings* in which people are detained:
- (e) any part of an *escape route* designed for use at any time by more than 250 people.

F6.3.4 The systems for visibility must operate continuously in *buildings* or parts of *buildings* in the following risk groups for the following periods after failure of the main lighting:

- (a) *risk group A*, until restoration of the main lighting system:
- (b) *risk group B*, 90 minutes:
- (c) *risk group C*, 30 minutes.

F6.3.5 Despite performance F6.3.4, if a *building* or part of a *building* falls into both *risk group A* and *risk group B*, the systems for visibility must operate for whichever is the longer of the periods specified in performance F6.3.4(a) and (b).

F6.3.6 Signs to indicate *escape routes* must be provided as required by Clause F8“Signs”.

Limits on application

CLAUSE F7—WARNING SYSTEMS**Provisions****OBJECTIVE**

F7.1 The objective of this provision is to safeguard people from injury or illness due to lack of awareness of an emergency.

FUNCTIONAL REQUIREMENT

F7.2 *Buildings* shall be provided with appropriate means of warning people to escape to a *safe place* [in an emergency].

PERFORMANCE

F7.3.1 A means of warning must alert people to the emergency in *adequate* time for them to reach a *safe place*.

F7.3.2 Appropriate means of detection and warning for *fire* must be provided within each *household unit*.

F7.3.3 Appropriate means of warning for *fire* and other emergencies must be provided in *buildings* as necessary to satisfy the other performance requirements of this code.

Limits on application

Performance F7.3 does not apply to *Out-buildings*[, *backcountry huts*,] or *Ancillary buildings*.

Clause F7.2 was amended, as from 24 April 2003, by regulation 3(1) Buildings Amendment Regulations (SR 2003/61) by adding the words "in an emergency".

Clause F7.3 was amended, as from 22 December 1994, by regulation 8 Buildings Regulations 1992, Amendment No 1 (SR 1994/263) by substituting the word "Ancillary" for the word "Ancilliary".

Clause F7.3 was substituted, as from 24 April 2003, by regulation 3(2) Buildings Amendment Regulations (SR 2003/61).

Schedule 1 clause F7.3.1: amended, on 31 October 2008, by regulation 9 of the Building (Building Code: Backcountry Huts) Amendment Regulations 2008 (SR 2008/358).

CLAUSE F8—SIGNS**Provisions****OBJECTIVE**

F8.1 The objective of this provision is to:

- (a) Safeguard people from injury or illness resulting from inadequate identification of *escape routes*, or of hazards within or about the *building*,
- (b) Safeguard people from loss of *amenity* due to inadequate direction, and
- (c) Ensure that *people with disabilities* are to carry out normal activities and processes within *buildings*.

FUNCTIONAL REQUIREMENT

F8.2 Signs shall be provided in and about *buildings* to identify:

- (a) *Escape routes*,
- (b) Emergency related safety features,
- (c) Potential hazards, and
- (d) *Accessible routes* and facilities for *people with disabilities*.

PERFORMANCE

F8.3.1 Signs shall be clearly visible and readily understandable under all conditions of foreseeable use.

F8.3.2 Signs indicating potential hazards shall be provided in sufficient locations to notify people before they encounter the hazard.

F8.3.3 Signs to facilitate escape shall:

- (a) Be provided in sufficient locations to identify *escape routes* and guide people to a *safe place*, and

[(b) Remain visible during failure of the main lighting for the period required by performance F6.3.4 and performance F6.3.5.]

F8.3.4 Signs shall be provided in sufficient locations to identify *accessible routes* and facilities provided for *people with disabilities*.

Limits on application

Objective F8.1(c) shall apply only to those *buildings* to which [section 47A of the Act] applies.

Requirement F8.2 shall not apply to *Detached Dwellings*, or within *household units of Multi-unit Dwellings*.

Note: Section 47A is in the Building Act 1991. The equivalent section in the Building Act 2004 is section 118.

The limits on application to clause F8.1(c) were amended consequential on the Health Reforms (Transitional Provisions) Act 1993, as from 29 December 2000, by regulation 4(1) Building Amendment Regulations 2000 (SR 2000/119), by substituting the expression ""section 47A of the Act"" for the expression ""section 25 of the Disabled Persons Community Welfare Act 1975"".

Clause F8.3.3(b) was substituted, as from 21 June 2007, by regulation 6(4) Building Amendment Regulations 2007 (SR 2007/124).

G Services and Facilities

CLAUSE G1—PERSONAL HYGIENE

Provisions

OBJECTIVE

G1.1 The objective of this provision is to:

- (a) Safeguard people from illness caused by infection or contamination,
- (b) Safeguard people from loss of *amenity* arising from the absence of appropriate personal hygiene facilities, and
- (c) Ensure *people with disabilities* are able to carry out normal activities and processes within *buildings*.

FUNCTIONAL REQUIREMENT

G1.2 *Buildings* shall be provided with appropriate spaces and facilities for personal hygiene.

PERFORMANCE

G1.3.1 *Sanitary fixtures* shall be provided in sufficient number and be appropriate for the people who are intended to use them.

G1.3.2 *Sanitary fixtures* shall be located, constructed and installed to:

- (a) Facilitate *sanitation*,
- (b) Avoid risk of food contamination,
- (c) Avoid harbouring dirt or germs,
- (d) Provide appropriate privacy,
- (e) Avoid affecting occupants of adjacent spaces from the presence of unpleasant odours, accumulation of offensive matter, or other source of annoyance,
- (f) Allow effective cleaning,
- (g) Discharge to a plumbing and drainage system as required by clause G13 “Foul water” when water-borne disposal is used, and
- (h) Provide a healthy safe disposal system when non-water-borne disposal is used.

G1.3.3 Facilities for personal hygiene shall be provided in convenient locations.

G1.3.4 Personal hygiene facilities provided for *people with disabilities* shall be *accessible*.

Limits on application

Objective G1.1(c) shall apply only to those *buildings* to which [section 47A of the Act] applies.

Performance G1.3.4 shall not apply to *Housing, Outbuildings, [backcountry huts,] Ancillary buildings, and to Industrial buildings* where no more than 10 people are employed.

Note: Section 47A is in the Building Act 1991. The equivalent section in the Building Act 2004 is section 118.

The limits on application to clause G1.1(c) were amended consequential on the Health Reforms (Transitional Provisions) Act 1993, as from 29 December 2000, by regulation 4(1) Building Amendment Regulations 2000 (SR 2000/119), by substituting the expression “section 47A of the Act” for the expression “section 25 of the Disabled Persons Community Welfare Act 1975”.

Schedule 1 clause G1.3.4: amended, on 31 October 2008, by regulation 10 of the Building (Building Code: Backcountry Huts) Amendment Regulations 2008 (SR 2008/358).

CLAUSE G2—LAUNDERING**Provisions****OBJECTIVE**

G2.1 The objective of this provision is to ensure:

- (a) *Adequate amenities* for people to do laundering, and
- (b) That *people with disabilities* are able to carry out normal activities and processes within *buildings*.

FUNCTIONAL REQUIREMENT

G2.2 *Buildings* shall be provided with *adequate* space and facilities for laundering.

PERFORMANCE

G2.3.1 Facilities shall have capacity for the *intended use*, and consist of *fixtures*, or space and services for appliances.

G2.3.2 Space shall be *adequate* in size to provide for the installation and use of *fixtures* or appliances.

G2.3.3 Space and facilities shall be provided within each accommodation unit or may be grouped elsewhere in a convenient location.

G2.3.4 *Accessible* facilities shall be provided for *people with disabilities*.

Limits on application

Objective G2.1(b) shall apply to those *buildings* to which [section 47A of the Act] applies.

Requirement G2.2 shall apply only to *Housing*, old people's homes, early childhood centres, camping grounds and work camps.

Performance G2.3.4 shall apply only to camping grounds.

Note: Section 47A is in the Building Act 1991. The equivalent section in the Building Act 2004 is section 118.

The limits on application to clause G2.1(b) were amended consequential on the Health Reforms (Transitional Provisions) Act 1993, as from 29 December 2000, by regulation 4(1) Building Amendment Regulations 2000 (SR 2000/119), by substituting the expression “section 47A of the Act” for the expression “section 25 of the Disabled Persons Community Welfare Act 1975”.

CLAUSE G3—FOOD PREPARATION AND PREVENTION OF CONTAMINATION**Provisions****OBJECTIVE**

G3.1 The objective of this provision is to:

- (a) Safeguard people from illness due to contamination,
- (b) Enable hygienic food preparation without loss of *amenity*, and
- (c) Ensure that *people with disabilities* are able to carry out normal activities and processes within *buildings*.

FUNCTIONAL REQUIREMENT

G3.2.1 *Buildings* shall be provided with space and facilities for the hygienic storage, preparation and cooking of food, that are *adequate* for the *intended use* of the *building*.

G3.2.2 *Buildings* used for the storage, manufacture or processing of food, including animal products, shall be constructed to safeguard the contents from contamination.

[G3.2.3] *Buildings* used for the medical treatment of humans or animals, or the reception of dead bodies, shall be constructed to avoid the spread of contamination from the *building* contents.

PERFORMANCE

G3.3.1 Food preparation facilities shall be hygienic and include:

- (a) Space for a refrigerator, or a perishable food storage area capable of being cooled and protected from vermin and insects,
- (b) Means for food rinsing, utensil washing and waste water disposal,
- (c) Means for cooking food, and
- (d) Space and a surface for food preparation.

Limits on application

Objective G3.1(c) shall apply only to those *buildings* to which [section 47A of the Act] applies.

Requirement G3.2.1 shall apply to *Housing*, work camps, old people's homes and early childhood centres, and where appropriate shall also apply to *Commercial* and *Industrial buildings* whose intended uses include the manufacture, preparation, packaging or storage of food.

Performance G3.3.1(a) and (b) shall apply to *Housing*, work camps, old people's homes, early childhood centres and *Commercial* or *Industrial buildings* whose *intended uses* include the handling of perishable food.

Performance G3.3.1(c) shall apply to *Housing*, work camps, old people's homes and early childhood centres.

Performance G3.3.1(d) shall apply to *Housing*, work camps, old people's homes and early childhood centres.

Note: Section 47A is in the Building Act 1991. The equivalent section in the Building Act 2004 is section 118.

Clause G3 was amended, as from 22 December 1994, by regulation 9 Buildings Regulations 1992, Amendment No 1 (SR 1994/263) by substituting the expression "G3.2.3" for the expression "G3.2.2" where it secondly occurred under the heading "FUNCTIONAL REQUIREMENT".

The limits on application to clause G3.1(c) were amended consequential on the Health Reforms (Transitional Provisions) Act 1993, as from 29 December 2000, by regulation 4(1) Building Amendment Regulations 2000 (SR 2000/119), by substituting the expression "section 47A of the Act" for the expression "section 25 of the Disabled Persons Community Welfare Act 1975".

CLAUSE G3—FOOD PREPARATION AND PREVENTION OF CONTAMINATION (continued)**Provisions**

G3.3.2 Spaces for food preparation and utensil washing shall have:

- (a) Interior linings and work surfaces shall be *impervious* and easily cleaned,
- (b) All *building elements* constructed with materials which are free from *hazardous substances* which could cause contamination to the *building contents*, and

(c) Exposed *building elements* located and shaped to avoid the accumulation of dirt.

G3.3.3 An *adequate* energy supply shall be provided, appropriately located for use by cooking and refrigeration appliances.

G3.3.4 Space and facilities shall be provided within each *household unit*, or grouped elsewhere in a convenient location.

G3.3.5 Where facilities are provided for *people with disabilities* they shall be *accessible*.

G3.3.6 Spaces in *buildings* shall be protected from the likelihood of contamination or vermin entering areas used for the storage, processing or preparation of food, and shall have a means of preventing contamination spreading from these areas to other spaces.

Limits on application

Performance G3.3.2(b) shall apply to *Housing*, work camps, old people's homes and early childhood centres, and where appropriate shall also apply to *Commercial* and *Industrial buildings* whose *intended uses* include the manufacture, preparation, packaging or storage of food.

Performance G3.3.2(c) shall not apply to *Housing*.

Performance G3.3.5 shall apply only to camping grounds and *accessible* accommodation units in *Communal Residential buildings*.

Performance G3.3.6 shall apply to *Commercial* or *Industrial buildings* whose *intended uses* include the handling of perishable food, the medical treatment of humans or animals, the slaughter of animals or the reception of dead bodies.

CLAUSE G4—VENTILATION**Provisions****OBJECTIVE**

G4.1 The objective of this provision is to safeguard people from illness or loss of *amenity* due to lack of fresh air.

FUNCTIONAL REQUIREMENT

G4.2 Spaces within *buildings* shall be provided with *adequate* ventilation consistent with their maximum occupancy [and their intended use].

PERFORMANCE

G4.3.1 Spaces within *buildings* shall have means of ventilation with *outdoor air* that will provide an *adequate* number of air changes to maintain air purity.

G4.3.2 Mechanical air-handling systems shall be constructed and maintained in a manner that prevents harmful bacteria, pathogens and allergens from multiplying within them.

G4.3.3 *Buildings* shall have a means of collecting or otherwise removing the following products from the spaces in which they are generated:

- (a) Cooking fumes and odours,
- (b) [Moisture] from laundering, utensil washing, bathing and showering,
- (c) Odours from sanitary and waste storage spaces,
- (d) Gaseous by-products and excessive moisture from commercial or industrial processes,
- (e) Poisonous fumes and gases,
- (f) Flammable fumes and gases,
- (g) Airborne particles,
- (h) Bacteria, viruses or other pathogens, or
- (i) Products of combustion.

G4.3.4 Contaminated air shall be disposed of in a way which avoids creating a nuisance or hazard to people and *other property*.

G4.3.5 The quantities of air supplied for ventilation shall meet the additional demands of any fixed *combustion appliances*.

Limits on application

Clause G4.2 Schedule was amended, as from 11 September 1997, by regulation 3(1) Building Amendment Regulations 1997 (SR 1997/156) by inserting the words “and their intended use”.

Clause G4.3.3(b) Schedule was amended, as from 11 September 1997, by regulation 3(1) Building Amendment Regulations 1997 (SR 1997/156) by substituting the word “Moisture” for the word “Steam”.

CLAUSE G5—INTERIOR ENVIRONMENT**Provisions****OBJECTIVE**

G5.1 The objective of this provision is to:

- (a) Safeguard people from illness caused by low air temperature,
- (b) Safeguard people from injury or loss of *amenity* caused by inadequate activity space,
- (c) Safeguard people from injury caused by unsafe installations, and
- (d) Ensure that *people with disabilities* are able to carry out normal activities and processes within *buildings*.

FUNCTIONAL REQUIREMENT

G5.2.1 *Buildings* shall be constructed to provide:

- (a) An *adequate*, controlled interior temperature,
- (b) *Adequate* activity space for the *intended use*, and
- (c) Accessible spaces and facilities.

G5.2.2 Heating appliances in *buildings* shall be installed in a way that reduces the likelihood of injury.

PERFORMANCE

G5.3.1 *Habitable spaces*, bathrooms and recreation rooms shall have provision for maintaining the internal temperature at no less than 16°C measured at 750mm above floor level, while the space is *adequately* ventilated.

G5.3.2 Heating appliances, and any attached cables, pipes or other fittings shall be securely fixed in place.

G5.3.3 *Habitable spaces* shall have sufficient space for activity, furniture, and sanitary and mobility aids.

G5.3.4 Where reception counters or desks are provided for public use, at least one counter or desk shall be *accessible*.

Limits on application

Objective G5.1(d) shall apply to those *buildings* to which [section 47A of the Act] applies.

Requirement G5.2.1(a) shall apply only to *habitable spaces*, bathrooms and recreation rooms in old people's homes and early childhood centres.

Requirement G5.2.1(b) shall apply only to [*old people's homes*].

Requirement G5.2.1(c) shall apply only to *Communal Residential, Communal Non-residential, and Commercial buildings*.

Performance G5.3.1 shall apply only to old people's homes and early childhood centres.

Performance G5.3.2 shall apply only to old people's homes and early childhood centres.

Performance G5.3.3 shall apply only to old people's homes.

Performance G5.3.4 applies only to *Communal Residential, Communal Non-Residential, and Commercial buildings*.

Note: Section 47A is in the Building Act 1991. The equivalent section in the Building Act 2004 is section 118.

Clause G5 was amended, as from 22 December 1994, by regulation 10 Buildings Regulations 1992, Amendment No 1 (SR 1994/263) by substituting the expression "old people's homes" for the expression "old people's homes" in italics in the second column, opposite clause G5.2.1(b)

The limits on application to clause G5.1(d) were amended consequential on the Health Reforms (Transitional Provisions) Act 1993, as from 29 December 2000, by regulation 4(1) Building Amendment Regulations 2000 (SR 2000/119), by substituting the expression "section 47A of the Act" for the expression "section 25 of the Disabled Persons Community Welfare Act 1975".

CLAUSE G5—INTERIOR ENVIRONMENT (continued)**Provisions**

G5.3.5 *Buildings* shall be provided with listening systems which enable enhanced hearing by people with hearing aids.

G5.3.6 Enhanced listening systems shall be identified by signs complying with Clause F8 "Signs".

Limits on application

Performance G5.3.5 applies only to:

- (a) *Communal Non-Residential* assembly spaces occupied by more than 250 people, and
- (b) Any theatre, cinema, or public hall, and
- (c) Assembly spaces in old people's homes occupied by more than 20 people.

CLAUSE G6—AIRBORNE AND IMPACT SOUND**Provisions****OBJECTIVE**

G6.1 The objective of this provision is to safeguard people from illness or loss of *amenity* as a result of undue noise being transmitted between abutting occupancies.

FUNCTIONAL REQUIREMENT

G6.2 *Building elements* which are common between occupancies, shall be constructed to prevent undue noise transmission from other occupancies or common spaces, to the *habitable spaces of household units*.

PERFORMANCE

G6.3.1 The *Sound Transmission Class* of walls, floors and ceilings, shall be no less than 55.

G6.3.2 The *Impact Insulation Class* of floors shall be no less than 55.

Limits on application

CLAUSE G7—NATURAL LIGHT**Provisions****OBJECTIVE**

G7.1 The objective of this provision is to safeguard people from illness or loss of *amenity* due to isolation from natural light and the outside environment.

FUNCTIONAL REQUIREMENT

G7.2 *Habitable spaces* shall provide *adequate* openings for natural light and for a visual awareness of the outside environment.

PERFORMANCE

G7.3.1 Natural light shall provide an *illuminance* of no less than 30 lux at floor level for 75 percent of the *standard year*.

G7.3.2 Openings to give awareness of the outside shall be transparent and provided in suitable locations.

Limits on application

Requirement G7.2 shall apply only to *Housing*, old people's homes and early childhood centres.

CLAUSE G8—ARTIFICIAL LIGHT**Provisions****OBJECTIVE**

G8.1 The objective of this provision is to safeguard people from injury due to lack of *adequate* lighting.

FUNCTIONAL REQUIREMENT

G8.2 Spaces within *buildings* used by people, shall be provided with *adequate* artificial lighting which, when activated in the absence of sufficient natural light, will enable safe movement.

PERFORMANCE

G8.3 *Illuminance* at floor level shall be no less than 20 lux.

Limits on application

Requirement G8.2 shall apply to:

- (a) All *exitways* in *Multi-unit Dwellings*, *Group Dwellings* and *Communal Residential* [(except *backcountry huts*)], *Communal Non-residential*, *Commercial* and *Industrial buildings*,
- (b) All *access routes* except those in *Outbuildings* [, *backcountry huts*,] and Ancillary buildings, and
- (c) All common spaces within *Multi-unit Dwellings*, *Group Dwellings*, and *Communal Residential* [(except *backcountry huts*)] and *Communal Non-residential buildings*.

[Performance G8.3 does not apply during a failure of the main lighting, when the requirements in Clause F6 “Visibility in escape routes” apply.]

Schedule 1 clause G8.2 paragraph (a): amended, on 31 October 2008, by regulation 11(1) of the Building (Building Code: Backcountry Huts) Amendment Regulations 2008 (SR 2008/358).

Schedule 1 clause G8.2 paragraph (b): amended, on 31 October 2008, by regulation 11(2) of the Building (Building Code: Backcountry Huts) Amendment Regulations 2008 (SR 2008/358).

Schedule 1 clause G8.2 paragraph (c): amended, on 31 October 2008, by regulation 11(3) of the Building (Building Code: Backcountry Huts) Amendment Regulations 2008 (SR 2008/358).

Clause G8.3 was amended, as from 21 June 2007, by regulation 6(5) Building Amendment Regulations 2007 (SR 2007/124) by substituting the limit on application.

CLAUSE G9—ELECTRICITY**Provisions****OBJECTIVE**

G9.1 The objective of this provision is to ensure that:

- (a) In *buildings* supplied with electricity, the *electrical installation* has safeguards against outbreak of *fire* and personal injury, and
- (b) *People with disabilities* are able to carry out normal activities and processes within *buildings*.

FUNCTIONAL REQUIREMENT

G9.2 Where provided in a *building*, *electrical installations* shall be safe for their *intended use*.

PERFORMANCE

G9.3.1 The *electrical installation* shall incorporate systems to:

- (a) Protect people from contact with parts of the installation which are live during normal operation, and to prevent parts of the installation or other *building elements* becoming live during fault conditions,
- (b) Permit the safe isolation of the installation and of electrical fittings and appliances,
- (c) Safeguard people from excessive temperatures resulting from either normal operation of electrical equipment, or from currents which could exceed the installation rating,
- (d) Safeguard people from injury which may result from electromechanical stress in electrical components caused by currents in excess of the installation rating,
- (e) Protect *building elements* from risk of ignition, impairment of their physical or mechanical properties, or function, due to temperature increases resulting from heat transfer or electric arc,
- (f) Operate safely in its intended environment, and
- (g) Safeguard against ignition of the surrounding atmosphere where it is potentially flammable or explosive.

Limits on application

Objective G9.1(b) shall apply only to those *buildings* to which [section 47A of the Act] applies.

Note: Section 47A is in the Building Act 1991. The equivalent section in the Building Act 2004 is section 118.

The limits on application to clause G9.1(b) were amended consequential on the Health Reforms (Transitional Provisions) Act 1993, as from 29 December 2000, by regulation 4(1) Building Amendment Regulations 2000 (SR 2000/119), by substituting the expression “section 47A of the Act” for the expression “section 25 of the Disabled Persons Community Welfare Act 1975”.

CLAUSE G9—ELECTRICITY (continued)**Provisions**

G9.3.2 An *electrical installation* supplying an essential service shall:

- (a) Maintain the supply for a time appropriate to that service, and
- (b) Be capable of being isolated from the supply system, independently of the remainder of the installation.

G9.3.3 An *electrical installation* connected to an *electrical supply system*, shall contain safeguards which protect the safety features of the external supply.

G9.3.4 In *buildings* intended for use by *people with disabilities*, light switches and plug socket outlets shall be *accessible* and usable.

Limits on application

Performance G9.3.4 shall not apply to Housing, *Outbuildings*, *Ancillary buildings*, and to *Industrial buildings* where no more than 10 people are employed.

CLAUSE G10—PIPED SERVICES**Provisions****OBJECTIVE**

G10.1 The objective of this provision is to safeguard people from injury or illness caused by extreme temperatures or *hazardous substances* associated with *building services*.

FUNCTIONAL REQUIREMENT

G10.2 In *buildings* provided with potentially *hazardous services* containing hot, cold, flammable, corrosive or toxic fluids, the installations shall be constructed to provide *adequate safety* for people.

PERFORMANCE

G10.3.1 Piping systems shall be constructed to avoid the likelihood of:

- (a) Significant leakage or damage during normal or reasonably foreseeable abnormal conditions,
- (b) Detrimental contamination of the contents by other substances,
- (c) Adverse interaction between services, or between piping and electrical systems, and
- (d) People having contact with pipes which could cause them harm.

G10.3.2 Provision shall be made for the ready removal of moisture or condensate in gas pipes.

G10.3.3 Pipes shall be protected against corrosion in the environment of their use.

G10.3.4 Piping systems shall be identified with markings if the contents are not readily apparent from the location or associated equipment.

G10.3.5 Enclosed spaces shall be constructed to avoid the likelihood of accumulating vented or leaking gas.

G10.3.6 Piped systems shall have isolation devices which permit the installation or individual items of apparatus to be isolated from the supply system, for maintenance, testing, fault detection and repair.

Limits on application

CLAUSE G11—GAS AS AN ENERGY SOURCE**Provisions****OBJECTIVE**

G11.1 The objective of this provision is to:

- (a) Safeguard people from injury arising from the use of gas as an energy source,
- (b) Safeguard people and *other property* from the risk of *fire* or explosion, and
- (c) Safeguard people from loss of *amenity* due to the gas supply being inadequate for the *intended use*.

FUNCTIONAL REQUIREMENT

G11.2 In *buildings* where gas is used as an energy source, the supply system shall be safe and *adequate* for its *intended use*.

PERFORMANCE

G11.3.1 Supply systems shall be constructed to maintain a safe pressure range appropriate to the appliances and the type of gas used.

G11.3.2 The gas supply to all appliances in a single ventilated space, shall be fitted with an automatic cut-off activated by failure of any continuous forced ventilation system used for combustion, ventilation or safe operation of a fixed gas appliance.

G11.3.3 A flued fixed gas appliance shall have no adverse interaction with any other flued appliance.

G11.3.4 Supply systems shall have isolation devices which permit the whole installation, or individual items of apparatus, to be isolated from the supply for maintenance, testing, fault detection or repair.

G11.3.5 Where gas is supplied from an external source, the supply system within *buildings* shall be constructed to avoid the likelihood of:

- (a) Contamination of the external supply from other gas sources within the *building*,
- (b) Adverse effects on the pressure of the external supply, and
- (c) The external supply pipe acting as an earthing conductor.

G11.3.6 The location and installation of meters and service risers shall meet the requirements of the *network utility operator*.

Limits on application

[CLAUSE G12—WATER SUPPLIES**Provisions****OBJECTIVE**

G12.1 The objective of this provision is to—

- (a) safeguard people from illness or injury caused by contaminated water:
- (b) safeguard people from injury caused by hot water system explosion, or from contact with excessively hot water:
- (c) safeguard people from loss of *amenity* arising from—
 - (i) a lack of hot water for personal hygiene; or
 - (ii) water for human consumption that is offensive in appearance, odour, or taste:
- (d) ensure that *people with disabilities* are able to carry out normal activities and functions within *buildings*.

FUNCTIONAL REQUIREMENT

G12.2 *Buildings* provided with water outlets, *sanitary fixtures*, or *sanitary appliances* must have safe and *adequate* water supplies.

PERFORMANCE

G12.3.1 Water intended for human consumption, food preparation, utensil washing, or oral hygiene must be potable

G12.3.2 A potable *water supply system* must be—

- (a) protected from contamination; and
- (b) installed in a manner that avoids the likelihood of contamination within the system and the *water main*; and
- (c) installed using components that will not contaminate the water.

G12.3.3 A non-potable *water supply system* used for personal hygiene must be installed in a manner that avoids the likelihood of illness or injury being caused by the system.

G12.3.4 Water pipes and outlets provided with non-potable water must be clearly identified.

Limits on application

Objective G12.1(d) applies only to those *buildings* to which section 47A of the Act applies.

[[Performance G12.3.1 does not apply to *backcountry huts*.]]

Note: Section 47A is in the Building Act 1991. The equivalent section in the Building Act 2004 is section 118.

Clause G12 was substituted, as from 3 January 2002, by regulation 3(10) Building Amendment Regulations 2001 (SR 2001/374).

Schedule 1 clause G12.3.1: amended, on 31 October 2008, by regulation 12 of the Building (Building Code: Backcountry Huts) Amendment Regulations 2008 (SR 2008/358).

The limits on application to clause G12.1(d) were amended consequential on the Health Reforms (Transitional Provisions) Act 1993, as from 29 December 2000, by regulation 4(1) Building Amendment Regulations 2000 (SR 2000/119), by substituting the expression “section 47A of the Act” for the expression “section 25 of the Disabled Persons Community Welfare Act 1975”.

CLAUSE G12—WATER SUPPLIES (continued)**Provisions**

G12.3.5 *Sanitary fixtures and sanitary appliances* must be provided with hot water when intended to be used for—

- (a) utensil washing; and
- (b) personal washing, showering, or bathing

G12.3.6 If hot water is provided to *sanitary fixtures* and *sanitary appliances* used for personal hygiene, it must be delivered at a temperature that avoids the likelihood of scalding.

G12.3.7 *Water supply systems* must be installed in a manner that—

- (a) pipes water to *sanitary fixtures* and *sanitary appliances* at flow rates that are *adequate* for the correct functioning of those *fixtures* and *appliances* under normal conditions; and
- (b) avoids the likelihood of leakage; and
- (c) allows reasonable access to components likely to need maintenance; and
- (d) allows the system and any backflow prevention devices to be isolated for testing and maintenance.

G12.3.8 Vessels used for producing or storing hot water must be provided with safety features that—

- (a) relieve excessive pressure during both normal and abnormal conditions; and
- (b) limit temperatures to avoid the likelihood of flash steam production in the event of rupture.

G12.3.9 A *hot water system* must be capable of being controlled to prevent the growth of legionella bacteria.

G12.3.10 Water supply taps must be *accessible* and usable for *people with disabilities*.

Limits on application

Performance G12.3.5(b) applies to only *housing*, retirement homes, and early childhood centres.

Performance G12.3.10 applies only to those *buildings* to which section 47A of the Act applies.]

Note: Section 47A is in the Building Act 1991. The equivalent section in the Building Act 2004 is section 118.

Clause G12.3.7 was amended, as from 22 December 1994, by regulation 11 Buildings Regulations 1992, Amendment No 1 (SR 1994/263) by substituting the word “legionella” for the word “legionalla”.

CLAUSE G13—FOUL WATER**Provisions****OBJECTIVE**

G13.1 The objective of this provision is to:

- (a) Safeguard people from illness due to infection or contamination resulting from personal hygiene activities, and
- (b) Safeguard people from loss of *amenity* due to the presence of unpleasant odours or the accumulation of offensive matter resulting from *foul water* disposal.

FUNCTIONAL REQUIREMENT

[G13.2 *Buildings* in which *sanitary fixtures* and *sanitary appliances* using water-borne waste disposal are installed must be provided with—]

- [(a) an *adequate* plumbing and drainage system to carry *foul water* to appropriate outfalls; and]
- [(b) if no *sewer* is available, an *adequate* system for the storage, treatment, and disposal of *foul water*.]

PERFORMANCE

G13.3.1 The *plumbing system* shall be constructed to:

- (a) Convey *foul water* from *buildings* to a drainage system,
- (b) Avoid the likelihood of blockage and leakage,
- (c) Avoid the likelihood of foul air and gases entering *buildings*, and
- (d) provide reasonable access for maintenance and clearing blockages.

G13.3.2 The drainage system shall:

- (a) Convey *foul water* to an appropriate *outfall*,
- (b) Be constructed to avoid the likelihood of blockage,
- (c) Be supported, jointed and protected in a way that will avoid the likelihood of penetration of roots or the entry of ground water,
- (d) Be provided with reasonable access for maintenance and clearing blockages,

Limits on application

Clause G13.2 was substituted, as from 21 June 2007, by regulation 7(1) Building Amendment Regulations 2007 (SR 2007/124).

CLAUSE G13—FOUL WATER (continued)**Provisions**

(e) Be ventilated to avoid the likelihood of foul air and gases accumulating in the drainage system and *sewer*, and

(f) Be constructed to avoid the likelihood of damage from superimposed loads or normal ground movement.

G13.3.3 Where a *sewer* connection is available, the drainage system shall be connected to the *sewer*, and the connection shall be made in a manner that avoids damage to the *sewer* and is to the approval of the *network utility operator*.

[G13.3.4 If no *sewer* is available, facilities for the storage, treatment, and disposal of *foul water* must be constructed—]

[(a) with *adequate* capacity for the volume of *foul water* and the frequency of disposal; and]

[(b) with *adequate* vehicle access for collection if required; and]

[(c) to avoid the likelihood of contamination of any potable water supplies in compliance with Clause G12 “Water supplies”; and]

[(d) to avoid the likelihood of contamination of soils, ground water, and waterways except as permitted under the Resource Management Act 1991; and]

[(e) from materials that are impervious both to the *foul water* for which disposal is required, and to water; and]

[(f) to avoid the likelihood of blockage and leakage; and]

[(g) to avoid the likelihood of foul air and gases accumulating within or entering into *buildings*; and]

[(h) to avoid the likelihood of unauthorised access by people; and]

[(i) to permit easy cleaning and maintenance; and]

[(j) to avoid the likelihood of damage from superimposed loads or normal ground movement; and]

[(k) if those facilities are buried underground, to resist hydrostatic uplift pressures.]

Limits on application

Clause G13.3.4 was substituted, as from 21 June 2007, by regulation 7(2) Building Amendment Regulations 2007 (SR 2007/124).

CLAUSE G14—INDUSTRIAL LIQUID WASTE**Provisions****OBJECTIVE**

G14.1 The objective of this provision is to safeguard people from injury or illness caused by infection or contamination resulting from industrial liquid waste.

FUNCTIONAL REQUIREMENT

G14.2 *Buildings*, in which industrial liquid waste is generated shall be provided with *adequate* spaces and facilities for the safe and hygienic collection, holding, treatment and disposal of the waste.

PERFORMANCE

G14.3.1 Industrial liquid waste shall be conveyed to storage containers and within disposal systems in a way which will:

- (a) Transfer wastes from *buildings* safely and hygienically,
- (b) Avoid the likelihood of blockage and leakage,
- (c) Avoid the likelihood of foul air and gases entering *buildings*, and
- (d) Provide reasonable access for clearing of blockages.

[G14.3.2 Facilities for the storage, treatment, and disposal of industrial liquid waste must be constructed—]

[(a) with adequate capacity for the volume of waste and the frequency of disposal; and]

[(b) with *adequate* vehicle access for collection if required; and]

[(c) to avoid the likelihood of contamination of any potable water supplies in compliance with Clause G12 “Water supplies”; and]

[(d) to avoid the likelihood of contamination of soils, ground water, and waterways except as permitted under the Resource Management Act 1991; and]

[(e) from materials that are impervious both to the waste for which disposal is required, and to water; and]

[(f) to avoid the likelihood of blockage and leakage; and]

Limits on application

Clause G14.3.2. (d) was amended, as from 22 December 1994, by regulation 12 Building Regulations 1992, Amendment No 1 (SR 1994/263) by omitting the words “by a resource consent given”.

Clause G14.3.2 was substituted, as from 21 June 2007, by regulation 8 Building Amendment Regulations 2007 (SR 2007/124).

CLAUSE G14—INDUSTRIAL LIQUID WASTE (continued)

Provisions

[(g) to avoid the likelihood of foul air and gases accumulating within or entering into *buildings*; and]

[(h) to avoid the likelihood of unauthorised access by people; and]

[(i) to permit easy cleaning and maintenance; and]

[(j) to avoid the likelihood of damage from superimposed loads or normal ground movement; and]

[(k) if those facilities are buried underground, to resist hydrostatic uplift pressures.]

Limits on application

CLAUSE G15—SOLID WASTE**Provisions****OBJECTIVE**

G15.1 The objective of this provision is to safeguard people from injury or illness caused by infection or contamination from solid waste.

FUNCTIONAL REQUIREMENT

G15.2 *Buildings* shall be provided with space and facilities for the collection, and safe hygienic holding prior to disposal, of solid waste arising from the *intended use* of the *buildings*.

PERFORMANCE

G15.3.1 Where provision is made within *buildings* for the collection and temporary holding of solid waste, the spaces provided shall be:

- (a) Of sufficient size for the volume of waste and frequency of disposal,
- (b) Provided with reasonable access for the depositing and collection of the waste,
- (c) Capable of maintaining sanitary conditions having regard to the types of waste and storage containers, and
- (d) Capable of maintaining the appropriate temperature for the type of waste stored.

G15.3.2 Where a rubbish chute is provided, it shall be located and constructed to:

- (a) Convey the solid waste to an appropriate storage container,
- (b) Avoid the likelihood of blockage or leakage,
- (c) Permit easy cleaning and maintenance,
- (d) Avoid the likelihood of foul air or gases accumulating or entering the *building*,
- (e) Avoid the likelihood of the spread of *fire* beyond the refuse chute,
- (f) Have openings that allow waste to be [safely] deposited in the chute, and
- (g) Restrict access by children, animals and vermin.

G15.3.3 Where it is acceptable to the *network utility operator*, solid waste which has been suitably treated for disposal to a *sewer* may be discharged via a *foul water drain* complying with Clause G13 "Foul water".

Limits on application

Requirement G15.2 shall not apply to *Detached Dwellings*, *household units* of *Multi-unit Dwellings*, *Outbuildings* or *Ancillary buildings* if there is independent access or private open space at ground level.

Clause G15.3.2(f) was amended, as from 22 December 1994, by regulation 13 Buildings Regulations 1992, Amendment No 1 (SR 1994/263) by substituting the word "safely" for the word "safety".

H Energy Efficiency

[CLAUSE H1—ENERGY EFFICIENCY PROVISIONS]

Provisions

OBJECTIVE

H1.1 The objective of this provision is to facilitate efficient use of energy.

FUNCTIONAL REQUIREMENT

H1.2 *Buildings* must be *constructed* to achieve an adequate degree of energy efficiency when that energy is used for—

[[(a) modifying temperature, modifying humidity, providing ventilation, or doing all or any of those things; or]]

(b) providing hot water to [[and from]] *sanitary fixtures* or *sanitary appliances*, or both; or

(c) providing artificial lighting

PERFORMANCE

H1.3.1 The *building* envelope enclosing spaces where the temperature or humidity (or both) are modified must be constructed to—

(a) provide *adequate thermal resistance*; and

(b) limit uncontrollable airflow.

H1.3.2 ...

[[**H1.3.2A** ...

[[**H1.3.2B** ...

[[**H1.3.2C**] ...

[[**H1.3.2D**] ...

[[**H1.3.2E** *Buildings* must be constructed to ensure that their *building performance index* does not exceed 1.55.]

H1.3.3 Account must be taken of physical conditions likely to affect energy performance of *buildings*, including—

(a) the thermal mass of *building elements*; and

(b) the building orientation and shape; and

(c) the airtightness of the *building* envelope; and

Limits on application

Objective H 1.1 applies only when the energy is sourced from a *network utility operator* or a depletable energy resource.

[[Requirement H1.2(a) does not apply to *assembly service buildings*, *industrial buildings*, *outbuildings*, or *ancillary buildings*.]]

Requirement H1.2(c) applies only to *commercial buildings* and *communal non-residential buildings* whose floor area is greater than 300 m².

[Performance H1.3.2E applies only to *Housing*.]]]

Clause H1 was substituted, as from 29 December 2000, by regulation 5 Building Amendment Regulations 2000 (SR 2000/119).

Schedule 1 clause H1.2(a): substituted, on 1 February 2009, by regulation 5 of the Building (Building Code: Energy Efficiency of Temperature, Humidity, and Ventilation Systems) Amendment Regulations 2008 (SR 2008/97).

Schedule 1 clause H1.2(b): amended, on 1 February 2009, by regulation 4 of the Building (Building Code: Energy Efficiency of Domestic Hot Water Systems) Amendment Regulations 2008 (SR 2009/256).

Schedule 1 clause H1.3.2: revoked, on 31 October 2007, by regulation 5 of the Building Amendment Regulations (No 2) 2007 (SR 2007/226).

Schedule 1 clause H1.3.2A: revoked, on 30 June 2008, by regulation 6 of the Building Amendment Regulations (No 2) 2007 (SR 2007/226).

CLAUSE H1—ENERGY EFFICIENCY PROVISIONS (continued)

Schedule 1 clause H1.3.2B: revoked, on 30 June 2008, by regulation 6 of the Building Amendment Regulations (No 2) 2007 (SR 2007/226).

Schedule 1 clause H1.3.2C: revoked, on 30 September 2008, by regulation 7(1) of the Building Amendment Regulations (No 2) 2007 (SR 2007/226).

Schedule 1 clause H1.3.2C: inserted, on 30 June 2008, by regulation 6 of the Building Amendment Regulations (No 2) 2007 (SR 2007/226).

Schedule 1 clause H1.3.2D: revoked, on 30 September 2008, by regulation 7(1) of the Building Amendment Regulations (No 2) 2007 (SR 2007/226).

Schedule 1 clause H1.3.2D: inserted, on 30 June 2008, by regulation 6 of the Building Amendment Regulations (No 2) 2007 (SR 2007/226).

Schedule 1 clause H1.3.2E: inserted, on 30 September 2008, by regulation 7(1) of the Building Amendment Regulations (No 2) 2007 (SR 2007/226).

Schedule 1 clause H1.3.4: substituted, on 1 February 2009, by regulation 5 of the Building (Building Code: Energy Efficiency of Domestic Hot Water Systems) Amendment Regulations 2008 (SR 2009/256).

Schedule 1 clause H1.3.6: added, on 1 February 2009, by regulation 6 of the Building (Building Code: Energy Efficiency of Temperature, Humidity, and Ventilation Systems) Amendment Regulations 2008 (SR 2008/97).

Publications Referenced in Handbook and Compliance Documents

For the purposes of New Zealand Building Code compliance, acceptable reference documents include only the quoted edition and specific amendments as listed below.

Dates in brackets indicate that the Standard was reviewed and reissued without change that year.

Compliance Documents in which the particular references are quoted are identified by the relevant Building Code Clause and the number of the Verification Method or Acceptable Solution.

For example: **B1/VM1/AS3** indicates that the reference occurs in Verification Method 1, and Acceptable Solution 3 of the Compliance Document for Clause B1 Structure.

Where references are quoted in the Compliance Schedule Handbook, these are identified by the letters HB and the relevant section. For example: HB/SS 3 indicates that the reference occurs in the content guide for SS 3 in the Compliance Schedule Handbook.

Places where the reference documents are quoted, are more specifically identified by paragraph or table, in the reference list contained in each Compliance Document.

Definitions

Many of the definitions in this section come from the Building Act 2004, regulations, including the Building Code, and Compliance Documents. Although every effort has been made to ensure definitions are accurate at the time of publication, it is possible that definitions may become out of date as changes occur to the legislation and Compliance Documents. In the event there is any discrepancy between the definitions in this section and the definitions in the legislation or Compliance Documents, the definitions in the legislation and Compliance Documents will prevail.

Note that some legislation and Compliance Documents may contain different definitions for the terms listed below. When using particular legislation or a Compliance Document, reference should be made to the definitions provided in that document.

| Definition | Source |
|--|----------------------|
| A | |
| Abutment The part of the valley side against which the <i>dam</i> is constructed. | DG |
| Acceptable risk The level of risk the public is prepared to accept without further management. The risk is the combination of the probability and the consequence of a specified hazardous event. | DG |
| Acceptable Solution means a solution that must be accepted as complying with the <i>Building Code</i> . | BA04 |
| Access chamber A chamber with working space at <i>drain</i> level through which the <i>drain</i> passes either as an open channel or as a pipe incorporating an <i>inspection point</i> . | CD-E1, CD-G13 |
| Access point A place where access may be made to a <i>drain</i> or <i>discharge pipe</i> for inspection, cleaning or maintenance; and may include a <i>cleaning eye</i> , <i>inspection point</i> , <i>rodding point</i> , <i>inspection chamber</i> or <i>access chamber</i> . | CD-G13 |
| Access route A continuous route that permits people and goods to move between the apron or <i>construction</i> edge of the <i>building</i> to spaces within a <i>building</i> , and between spaces within a <i>building</i> . | Code |

| Definition | Source |
|--|---------------|
| Accessible Having features to permit use by <i>people with disabilities</i> . | Code |
| Accessible route An <i>access route</i> usable by <i>people with disabilities</i> . It shall be a continuous route that can be negotiated unaided by a wheelchair user. The route shall extend from street <i>boundary</i> or car parking area to those spaces within the <i>building</i> required to be <i>accessible</i> to enable <i>people with disabilities</i> to carry out normal activities and processes within the <i>building</i> . | Code |
| Accessible stairway A <i>stairway</i> having features for use by a <i>person with a disability</i> . <i>Buildings</i> required to be <i>accessible</i> shall have at least one <i>accessible stairway</i> leading off an <i>accessible route</i> whether or not a lift is provided. | CD-C |
| Accreditation certificate means a certificate that was issued by the Building Industry Authority under the Building Act 1991. | HB |
| COMMENT: <i>Accreditation certificates</i> have become product certificates under the <i>Building Act 2004</i> and are subject to the product certification scheme under the <i>Building Act 2004</i> . | |
| Active conductor Any conductor in which the electrical potential differs from that of a neutral conductor or earth. | CD-F8 |
| Adequate means <i>Adequate</i> to achieve the objectives of the <i>Building Code</i> . | Code |
| Adjacent building A nearby <i>building</i> , including an adjoining <i>building</i> , whether or not erected on <i>other property</i> . | Code |
| Air gap The vertical distance through air between the lowest point of the water supply outlet and the <i>flood level rim</i> of the equipment or the <i>fixture</i> into which the outlet discharges. | CD-G12 |
| Air admittance valve A valve that allows air to enter but not to escape in order to limit pressure fluctuations within the sanitary plumbing or drainage system. | CD-G13 |
| Air seal A continuous seal fitted between a window or door reveal and the surrounding wall <i>framing</i> to prevent the flow of air into the interior of the <i>building</i> . | CD-E2 |
| Allotment has the meaning given to it by section 10 of the <i>Building Act 2004</i> . Section 10 states: “(1) In this Act, unless the context otherwise requires, allotment means a parcel of land— (a) that is a continuous area of land; and (b) whose boundaries are shown on a survey plan, whether or not as a subdivision— (i) approved by way of a subdivision consent granted under the Resource Management Act 1991; or (ii) allowed or granted under any other Act; and (c) that is— (i) subject to the Land Transfer Act 1952 and comprised in 1 certificate of title or for which 1 certificate of title could be issued under that Act; or (ii) not subject to that Act and was acquired by its owner under 1 instrument of conveyance | BA04 |

| Definition | Source |
|---|-----------------------------|
| <p>(2) For the purposes of subsection (1), an allotment is taken—</p> <p>(a) to be a continuous area of land even if part of it is physically separated from any other part by a road or in any other manner, unless the division of the allotment into those parts has been allowed by a subdivision consent granted under the Resource Management Act 1991 or a subdivision approval under any former enactment relating to the subdivision of land:</p> <p>(b) to include the balance of any land from which any allotment is being or has been subdivided."</p> | |
| <p>Alter in relation to a <i>building</i>, includes to rebuild, re-erect, repair, enlarge and extend the <i>building</i>.</p> | BA04 |
| <p>Alternative solution means a solution that is compliant with the <i>Building Code</i> but is not part of the <i>Compliance Document</i>.</p> | HB |
| <p>Aluminium flashings Aluminium <i>flashings</i> shall be a minimum thickness of 0.7 mm, and formed from 5000 series in accordance with AS/NZS 1734 and, where pre-painted, have a factory-applied finish complying with AS/NZS 2728.</p> | Simple House |
| <p>Aluminium-zinc coated steel flashings Aluminium-zinc coated steel flashings shall be:</p> <p>(a) <i>BMT</i> 0.55 mm minimum of steel for <i>flashings</i> generally</p> <p>(b) <i>BMT</i> 0.4 mm of steel for roll-formed roll-top ridge <i>flashings</i></p> <p>(c) in aluminium-zinc coating of AZ150 to AS 1397, with a factory-applied finish in accordance with AS/NZS 2728 Type 4, and in sea spray zone and corrosion zone 1 the factory-applied finish shall be Type 5 minimum.</p> | Simple House |
| <p>Amenity means an attribute of a <i>building</i> which contributes to the health, physical independence, and well being of the <i>building's</i> users but which is not associated with disease or a specific illness.</p> | Code |
| <p>Anti-ponding board A board laid under the lowest row of concrete and clay roof tiles and supports the <i>roof underlay</i>. The board is sloped to ensure moisture under the tiles is directed to the exterior of the roof.</p> | CD-E2 |
| <p>Appliance hearth A layer of <i>non-combustible</i> material under or near an appliance. It may be either part of the <i>building</i> structure or an overlay on a <i>combustible</i> floor.</p> | CD-C |

| <p>Asbestos as defined by the Health and Safety in Employment (Asbestos) Regulations 1983 means:</p> <p>(a) Actinolite, amosite, chrysotile, crocidolite, fibrous anthophyllite, or tremolite; or</p> <p>(b) A mixture containing a mineral specified in paragraph a) of this definition; or</p> <p>(c) A material that is composed wholly or partly of any such mineral; or</p> <p>(d) A material or article that is contaminated by any such material.</p> | <p>CD-F2</p> |
|---|---------------------|

COMMENT:
Asbestos now has the meaning given to it by Regulation 2 of the Health and Safety in Employment (Asbestos) Regulations 1998. This meaning is:

(a) Amosite, chrysotile, crocidolite, fibrous actinolite, fibrous anthophyllite, or fibrous tremolite; or

(b) A mixture containing a mineral specified in paragraph (a); or

(c) A material that is composed wholly or partly of a mineral specified in paragraph (a); or

(d) A material or article that is contaminated by a mineral specified in paragraph (a):

| Definition | Source |
|---|---------------------|
| (d) has been certified by the Director-General as being in a location that wheelchair users are unlikely to be able to visit; and | |
| (e) is intended to be able to sleep— | |
| (i) no more than 20 people in its <i>backcountry hut sleeping area</i> ; and | |
| (ii) no more than 40 people in total; and | |
| (f) does not contain any connection, except by <i>radiocommunications</i> , to a <i>network utility operator</i>] | |
| Backcountry hut sleeping area means the area of a backcountry hut that contains sleeping platforms, bunks, or beds that are— | Code |
| (a) within the same room as a food preparation or eating area; or | |
| (b) in a fully enclosed room that is separate from any food preparation or eating area and has— | |
| (i) internal walls that limit the spread of fire; and | |
| (ii) the means of direct egress to outside the hut. | |
| Backflow A flowing back or reversal of the normal direction of the flow caused by <i>back-pressure</i> and includes <i>back-siphonage</i> . | CD-C |
| Backflow prevention device A device that prevents <i>backflow</i> . | CD-C, CD-G12 |
| Backing rod Closed cell polyethylene foam (PEF) rod inserted into gap to provide backing support for foam <i>air seal</i> or <i>sealant</i> . | Simple House |
| Back-pressure A <i>backflow</i> condition caused by the downstream pressure becoming greater than the supply pressure. | CD-G12 |
| Back-siphonage <i>Backflow</i> condition caused by the supply pressure becoming less than the downstream pressure. | CD-G12 |
| Baluster A post providing the support for the top and bottom rails of a barrier. | CD-B1, CD-B2 |
| Baluster An infill member that provides support for the top and bottom rails of a barrier. | Simple House |
| Balustrade The infill parts of a barrier (typically between floor and top rail). | CD-B2, CD-F4 |
| Basement Any <i>firecell</i> or part of a <i>firecell</i> below the level of the lowest <i>final exit</i> . | CD-C |
| COMMENT: | |
| Because <i>fire safety precautions</i> are increased with increases in <i>escape height</i> , the precautions for <i>basements</i> increase with <i>basement</i> depth. Thus a single floor <i>building</i> with one <i>basement</i> level is treated as a two floor <i>building</i> , a single floor <i>building</i> with three <i>basement</i> levels as a four floor <i>building</i> and the requirements of C/AS1 Table 4.1 shall be applied downwards as opposed to upwards for levels above ground. | |
| Base metal thickness (BMT) The thickness of the bare or base metal before any subsequent coating, such as galvanizing. | CD-E2 |
| Batten See ceiling batten, tile batten . | Simple House |

-
- (b) includes—
 - (i) a mechanical, electrical, or other system; and
 - (ii) a fence as defined in section 2 of the Fencing of Swimming Pools Act 1987; and
 - (iii) a vehicle or motor vehicle (including a vehicle or motor vehicle as defined in section 2(1) of the Land Transport Act 1998) that is immovable and is occupied by people on a permanent or long term basis; and
 - (iv) a vehicle or motor vehicle (including a vehicle or motor vehicle as defined in section 2(1) of the Land Transport Act 1998) that is immovable and is occupied by people on a permanent or long term basis; and
 - (v) a mast pole or a telecommunication aerial that is on, or forms part of, a building and that is more than 7 m in height above the point of its attachment or base support (except a dish aerial that is less than 2 m wide); and
 - (c) includes any 2 or more buildings that, on completion of building work, are intended to be managed as one building with a common use and a common set of ownership arrangements; and
 - (d) includes the non-moving parts of a cable car attached to or servicing a building; and
 - (e) after 30 March 2008, includes the moving parts of a cable car attached to or servicing a building
 - (2) Subsection (1)(b)(i) only applies if—
 - (a) the mechanical, electrical, or other system is attached to the structure referred to in subsection (1)(a); and
 - (b) the system—
 - (i) is required by the Building Code; or
 - (ii) if installed, is required to comply with the Building Code.
 - (3) Subsection (1)(c) only applies in relation to—
 - (a) subpart 2 of Part 2; and
 - (b) a building consent; and
 - (c) a code compliance certificate; and
 - (d) a compliance schedule.
 - (4) This section is subject to section 9.”

Section 9 states:

“9 Building: what it does not include

In this Act, **building** does not include—

- (a) a NUO system, or part of a NUO system, that—
 - (i) is external to the building; and
 - (ii) is connected to, or is intended to be connected to, the building to provide for the successful functioning of the NUO system in accordance with the system’s intended design and purpose; and
 - (iii) is not a mast pole or a telecommunication aerial that is on, or forms part of, a building; or
- (b) cranes (including any cranes as defined in regulations made under the Health and Safety in Employment Act 1992); or
- (c) any of the following, whether or not incorporated within another structure:
 - (i) ski tows;
 - (ii) other similar stand-alone machinery systems; or

| | Definition | Source |
|----------------------|---|-----------------------|
| | Department means the Department of Building and Housing. | HB |
| Amend 11 Sep 2010 | Department of Conservation means the department of State established by section 5 of the Conservation Act 1987. | Code |
| | Determination means a determination made by the Chief Executive under subpart 1 of Part 3 of the <i>Building Act 2004</i> . | BA04 |
| | Developed length The total length along the centre line of a pipe including fittings and bends. | CD-G13 |
| Amend 11 Sep 2010 | Diagonal brace A member of a framed <i>building</i> fixed diagonally and used to resist tension or compression or both. | Simple House |
| | Diameter (or bore) The nominal internal <i>diameter</i> . | CD-G12, CD-G13 |
| | Direct fixed A term used to describe a wall <i>cladding</i> attached directly to the wall <i>framing</i> , without the use of a <i>drained cavity</i> . | CD-E2 |
| Amend 11 Sep 2010 | Director-General has the same meaning as in section 2(1) of the Conservation Act 1987. | Code |
| | Discharge pipe Any pipe that is intended to convey discharge from <i>sanitary fixtures</i> or <i>sanitary appliances</i> . | CD-G13 |
| | Discharge stack A <i>discharge pipe</i> that has one or more <i>discharge pipe</i> connections, and which is vented at one end via a <i>discharge stack vent</i> . | CD-G13 |
| | Discharge stack vent A <i>vent pipe</i> connected to the top of the <i>discharge stack</i> . | CD-G13 |
| | Discharge unit The unit of measure for the discharge (hydraulic load) in the <i>plumbing system</i> , and is based on the rate, duration and frequency of discharge from a <i>sanitary fixture</i> or <i>sanitary appliance</i> . | CD-G13 |
| | Doorset A complete assembly comprising a door leaf or leaves including any glazed or solid panels adjacent to or over the leaves within the door frame including hardware or other inbuilt features; and a door frame, if any, with its fixings to the wall and, for a sliding or tilting door, all guides and their respective fixings to the lintel, wall or sill. | CD-C, CD-F8 |
| | Dormer or dormer window A framed structure that projects from a sloping roof, and has a window at its outer end. | CD-E2 |
| | Drain A pipe normally laid below ground level including fittings and equipment and intended to convey <i>foul water</i> or <i>surface water</i> to an <i>outfall</i> . | Code |
| | Drained cavity A cavity space, immediately behind a wall <i>cladding</i> , that has vents at the base of the wall. Also known as a drained and vented cavity and referred to in E2/AS1 as a cavity. A <i>drained cavity</i> assists drying by allowing water which occasionally penetrates the wall <i>cladding system</i> to drain to the exterior of the <i>building</i> , and any remaining moisture to dry by evaporation. Where E2/AS1 requires a nominal 20 mm <i>drained cavity</i> , the depth shall be between limits of 18 mm and 25 mm. For definition of masonry veneer cavity refer to SNZ HB 4236. | CD-E2 |
| | Drain vent pipe Any pipe which is intended to permit the movement of air into and out of the <i>drain</i> and <i>sewer</i> . | CD-G13 |

| Definition | Source |
|---|--------------|
| Draught diverter A device, without moving parts, fitted in the <i>flue</i> of an appliance for isolating the combustion system from the effects of pressure changes in the secondary <i>flue</i> . | CD-G4, CD-C |
| Drip edge Fold(s) applied to the edge of a horizontal metal <i>flashing</i> to deflect moisture away from the <i>cladding system</i> below. Refer also <i>Bird's beak</i> and <i>Kick-out</i> . | CD-E2 |
| Durable Resistant to wear and decay. | CD-B2 |
| Dwang A short horizontal member fixed between vertical <i>framing</i> timbers. Also known as noggling. | CD-E2 |
| E | |
| Early childhood centre A facility used for the education or care of children under the age of six, and required to be licensed under the Education (Early Childhood Centres) Regulations 1998. | CD-C |
| Eaves That part of the roof <i>construction</i> , including <i>cladding</i> , fascia and gutter, that extends beyond the exterior face of the wall. | CD-E2 |
| Eaves bearer or soffit bearer or sprocket A horizontal member attached to the end of a truss or a <i>rafter</i> and to a <i>stud</i> , or a ribbon board, or a soffit plate, and to which the <i>eaves lining</i> is attached. | Simple House |
| EPDM Ethylene Propylene Diene Monomer – a thermosetting synthetic rubber. See butyl rubber . | Simple House |
| EIFS (Exterior Insulation and Finish System) A polystyrene sheet-based <i>cladding system</i> that uses mesh reinforced polymer-modified cement-based or polymer-based plaster base coats and a protective top coating. | CD-E2 |
| Electrical fixed appliance An electrical appliance which is fixed-wired to the <i>electrical installation</i> , or intended to remain permanently attached and form part of the <i>building</i> . | Code |
| Electrical installation Any <i>electrical fixed appliances</i> and components used in the reticulation of electricity, which are intended to remain permanently attached to and form part of the <i>building</i> . | Code |
| Electrical supply system The source of electricity external to the <i>electrical installation</i> . | Code |
| Electrolytic corrosion Galvanic corrosion commonly resulting from the contact of two dissimilar metals when an electrolyte such as water is present. | CD-E2 |
| Enclosed balustrade A timber-framed barrier with <i>cladding</i> across all exposed faces. | CD-E2 |
| Enclosed deck A <i>deck</i> , whether over an interior or exterior space, that has an impermeable upper surface and is closed on the underside. May also be known as a balcony. | CD-E2 |
| Energy work means— | BA04 |
| (a) gasfitting; or | |
| (b) prescribed electrical work | |

Amend 11

Amend 11
Sep 2010

| Definition | Source |
|--|------------------------------|
| Energy work certificate means a certificate of the kind referred to in section 19(1)(e) of the <i>Building Act 2004</i> . | BA04 |
| Envelope complexity The categorisation of the complexity of the total <i>building</i> envelope into one of four classes, depending on the particular features of the <i>building</i> as specified in E2/AS1. | CD-E2 |
| EPDM (Ethylene Propylene Diene Monomer) A thermosetting synthetic rubber used as a resilient part of a sealing washer, or as a roof <i>membrane</i> . | CD-E2 |
| Equivalent aerodynamic area The area of an equivalent aerodynamically perfect orifice, and equals the penetration area required by the natural ventilation device multiplied by the discharge coefficient determined under test. | CD-G4 |
| Escape height The height between the floor level in the <i>firecell</i> being considered and the floor level of the required <i>final exit</i> which is the greatest vertical distance above or below that <i>firecell</i> . | CD-C, CD-F3 CD-F6 |
| COMMENT: | |
| <ol style="list-style-type: none"> 1. It is necessary only to use the greatest height to the exits required for the <i>firecell</i> being considered, even though the <i>building</i> may have other <i>final exits</i> at lower or higher levels. 2. Where the <i>firecell</i> contains <i>intermediate floors</i>, or upper floors within <i>household units</i> the <i>escape height</i> shall be measured from the floor having the greatest vertical separation from the <i>final exit</i>. | |
| Escape route A continuous unobstructed route from any <i>occupied space</i> in a <i>building</i> to a <i>final exit</i> to enable occupants to reach a <i>safe place</i> , and shall comprise one or more of the following: <i>open paths, protected paths</i> and <i>safe paths</i> . | Code |
| COMMENT: | |
| Doors are not obstructions in an <i>escape route</i> provided they comply with C/AS1 Part 3 and D1/AS1. | |
| Essential service In the context of an <i>electrical installation</i> means emergency lighting, firemen's lifts, alarms, water pumps, sprinklers, detectors, ventilation systems and public address systems necessary for the safety of people in <i>buildings</i> . | Code |
| Estimated value in relation to <i>building work</i> , means the estimated aggregate of the values, determined in accordance with section 10 of the Goods and Services Tax Act 1985, of all goods and services to be supplied for the <i>building work</i> . | BA04 |
| Evacuation time The time taken by the occupants of the <i>building</i> to evacuate the <i>building</i> to a <i>final exit</i> . | Code |
| Exitway All parts of an <i>escape route</i> protected by <i>fire</i> or <i>smoke separations</i> , or by distance when exposed to open air, and terminating at a <i>final exit</i> . | Code |
| Expansion joint A joint designed to prevent damage by accommodating movement. See also <i>Control joint</i> . | CD-E2 |

| Definition | Source |
|--|--------------|
| <p>External wall Any exterior face of a <i>building</i> within 30° of vertical, consisting of <i>primary</i> and/or <i>secondary elements</i> intended to provide protection against the outdoor environment, but which may also contain <i>unprotected areas</i>.</p> <p>COMMENT: A roof is an <i>external wall</i> if within 30° of the vertical.</p> | Code |
| <p>External wall An outer wall of a <i>building</i>.</p> | Simple House |
| F | |
| <p>Factor of safety in relation to any <i>building</i> means the ratio of resisting forces to applied forces for a given loading condition. It is generally expressed to two significant figures.</p> | CD-B1 |
| <p>Falsework, in relation to <i>building work</i> or the maintenance of a <i>building</i>,—`</p> <p>(a) means any temporary structure or framework used to support materials, equipment, or an assembly; and</p> <p>(b) includes steel tubes, adjustable steel props, proprietary frames, or other means used to support a permanent structure until it becomes self-supporting; but</p> <p>(c) does not include scaffolding or cranes used for support.</p> | BA04 |
| <p>Final exit The point at which an <i>escape route</i> terminates by giving direct access to a <i>safe place</i>.</p> <p>COMMENT: <i>Final exits</i> are commonly the external doors from a ground floor, but this applies only if such doors open directly onto a <i>safe place</i>. If a <i>safe place</i> can be reached only by passing down an alley, or across a bridge, then the <i>final exit</i> is not reached until the end of such an alley or bridge. <i>Final exits</i>, therefore, should be seen strictly as a point of arrival, rather than as any particular element of a <i>building</i>. They are determined entirely by the definition of <i>safe place</i>.</p> | Code |
| <p>Finished ground level (FGL) The level of the ground after all backfilling, landscaping and surface paving has been completed.</p> | CD-E2 |
| <p>Fire The state of combustion during which flammable materials burn producing heat, toxic gases, or smoke or flame or any combination of these.</p> | Code |
| <p>Firecell Any space including a group of contiguous spaces on the same or different levels within a <i>building</i>, which is enclosed by any combination of <i>fire separations</i>, <i>external walls</i>, roofs, and floors.</p> <p>COMMENT: Floors, in this context, includes ground floors and those in which the underside is exposed to the external environment (eg, when cantilevered). Note also that internal floors between <i>firecells</i> are <i>fire separations</i>.</p> | Code |
| <p>Firecell rating (F) The <i>fire resistance rating (FRR)</i> intended to prevent <i>fire</i> spread to another <i>firecell</i>, for sufficient time to provide for safe evacuation of occupants and protection of adjacent <i>housing units</i> and sleeping areas in the <i>building</i> of <i>fire</i> origin and fire fighters engaged in fire fighting and rescue operations.</p> | CD-C |

Amend 11
Sep 2010

| Definition | Source |
|-------------------|---------------|
|-------------------|---------------|

COMMENT:

1. The purpose of the *firecell rating* is to prevent premature collapse of elements of structure in order to protect:
 - (a) The occupants, some of whom may have to remain in the *building* for some time while evacuation proceeds, particularly if the *building* is a large one.
 - (b) Adjacent *household units* and sleeping areas in the *building* of *fire* origin.
 - (c) Fire fighters engaged on rescue and fire fighting operations (although this is limited because property protection in the *building* of origin is not a matter covered by the New Zealand Building Code except as required by b) above).
2. The use of the *F rating* to determine the *FRR* of a *primary* or *secondary element* is discussed in C/AS1 Part 5.

Fire damper A device with a specified *FRR* complete with fixings and operating mechanism for automatically closing off an airway where it passes through a *fire separation*.

CD-C**COMMENT:**

An airway may be a duct, plenum, ceiling space, roof space or similar *construction* used for the passage of ventilating air.

Fire door A *doorset*, single or multi-leaf, having a specific *fire resistance rating*, and in certain situations a smoke control capability, and forming part of a *fire separation*. The door, in the event of *fire*, if not already closed, will close automatically and be self latching.

CD-C**COMMENT:**

Requirements for fire doors are given in C/AS1 Paragraphs 6.19.1 and 6.19.8 and Appendix C, Paragraph C 8.1.

Fire hazard means the danger of potential harm and degree of exposure arising from—

BA04

(a) the start and spread of *fire*; and

(b) the smoke and gases that are generated by the start and spread of *fire*.

Fire hazard category (FHC) The number (graded 1 to 4 in order of increasing severity), used to classify *purpose groups* or activities having a similar *fire hazard*, and where fully developed *fires* are likely to have similar impact on the structural stability of the *building*.

CD-C**COMMENT:**

Fire hazard categories are identified in C/AS1 Table 2.1.

Fire intensity The rate release of calorific energy in watts, determined either theoretically or empirically, as applicable.

Code

Fire load The sum of the net calorific values of the *combustible* contents which can reasonably be expected to burn within a *firecell*, including furnishings, built-in and removable materials, and *building elements*. The calorific values shall be determined at the ambient moisture content or humidity. (The unit of measurement is MJ.)

Code

Fire load energy density (FLED) The total *fire load* divided by the *firecell* floor area. In this calculation the floor area shall include circulation and service spaces, but exclude *exitways* and *protected shafts*.

CD-C

Definition

Source

COMMENT:

The total *fire load* is converted to *fire load* energy terms in megajoules (MJ) for calculation of the *FLED* (MJ/m²).

Fireplace A space formed by the *chimney back*, the *chimney jambs*, and the *chimney breast* in which fuel is burned for the purpose of heating the room into which it opens.

CD-C, CD-B1

Fire resistance rating (FRR) The term used to describe the minimum *fire* resistance required of *primary* and *secondary elements* as determined in the *standard test* for *fire* resistance, or in accordance with a specific calculation method verified by experimental data from standard *fire* resistance tests. It comprises three numbers giving the time in minutes for which each of the criteria *stability*, *integrity* and *insulation* are satisfied, and is presented always in that order.

CD-C

COMMENT:

1. Examples of *FRRs* are:

- (a) 30/30/15 indicating *stability* 30 minutes, *integrity* 30 minutes, *insulation* 15 minutes.
- (b) 30/-/- indicating *stability* 30 minutes, but no time requirement for *integrity* or *insulation*.
- (c) -/15/15 indicating no time requirement for *stability*, but 15 minutes for *integrity* and *insulation*.
- (d) 60/30/x indicating *stability* of 60 minutes, *integrity* of 30 minutes, and a requirement for *insulation* from C/AS1 Paragraph 5.6.4.

2. C/AS1 Part 5 gives more information on *FRRs*.

Fire resisting closure A *fire* rated device or assembly for closing an opening through a *fire separation*. It shall have a *FRR* of no less than that required for the *fire separation*.

Code

COMMENT:

A *fire resisting closure* is intended to include *fire doors*, *fire windows* or access panels. In this context the opening may be used to permit passage of people or goods, or to transmit light, but does not include an opening to permit the passage of *building services*.

Fire resisting glazing Fixed or openable glazing, complete with frame and fixings, mullions, transoms and glazing beads, with a specified *FRR* and complying with NZS 4232: Part 2.

CD-C

COMMENT:

1. The requirement for *fire resisting glazing* will not be met by ordinary window glass, or safety glasses, but rather by wired glass, or by special *fire* resisting glass shown by test to perform adequately. The nature and design of the frames also have an effect on the performance of *fire resisting glazing*.
2. Openable glazing is required by NZS 4232 Part 2 to be fitted with an automatic device which, in the event of *fire*, will close and latch the window sash.

Fire safety precautions (FSPs) The combination of all methods used in a *building* to warn people of an emergency, provide for safe evacuation, and restrict the spread of *fire*, and includes both active and passive protection.

CD-C, CD-F7

COMMENT:

This definition has the same meaning and wording as the definition of "fire safety systems" in the Building Regulations.

| Definition | Source |
|---|--------|
| <p>Fire safety systems The combination of all methods used in a <i>building</i> to warn people of an emergency, provide for safe evacuation, and restrict the spread of <i>fire</i>, and includes both active and passive protection.</p> | Code |
| <p>Fire separation Any <i>building element</i> which separates <i>firecells</i> or <i>firecells</i> and <i>safe paths</i>, and provides a specific <i>fire resistance rating</i>.</p> | Code |
| <p>Fire shutter A <i>fire</i> rated device, complete with fixings and operating mechanism, for automatically closing off an opening in a <i>fire separation</i> or <i>protected shaft</i>.</p> | CD-C |
| <p>Fire stop A material or method of <i>construction</i> used to restrict the spread of <i>fire</i> within or through <i>fire separations</i>, and having a <i>FRR</i> no less than that of the <i>fire separation</i>.</p> | CD-C |
| <p>COMMENT: <i>Fire stops</i> are mainly used to seal around <i>penetrations</i>, but can also be used to seal narrow gaps between <i>building elements</i>.</p> | |
| <p>Fixture An article intended to remain permanently attached to and form part of a <i>building</i>.</p> | Code |
| <p>Fixture discharge pipe A <i>discharge pipe</i> that is used to convey waste from a single <i>sanitary fixture</i> or <i>sanitary appliance</i> to a <i>branch discharge pipe</i>, a <i>discharge stack</i>, or directly to a <i>drain</i>. It does not include any pipes forming part of a <i>sanitary appliance</i>.</p> | CD-G13 |
| <p>Fixture vent pipe (trap vent) A <i>vent pipe</i> that is connected to a <i>fixture discharge pipe</i> or the <i>sanitary fixture</i> itself.</p> | CD-G13 |
| <p>Flame barrier A material or system applied or installed to protect another <i>building element</i> from flame contact. The protection shall be effective for no less than 10 minutes exposure in the <i>standard test</i> for <i>fire</i> resistance.</p> | CD-C |
| <p>COMMENT: 1. The principal use of <i>flame barriers</i> is to delay ignition of <i>foamed plastics</i> materials. 2. Refer to Appendix C Paragraph C10.1 of C/AS1 for details of the test requirements for <i>flame barriers</i>.</p> | |
| <p>Flame safeguard system A system consisting of a flame detector(s) plus associated circuitry, integral components, valves and interlocks the function of which is to shut off the fuel supply to the burner(s) in the event of ignition failure or flame failure.</p> | CD-G11 |
| <p>Flammability index (FI) That index number for flammability, which is determined according to the <i>standard test</i> method for flammability of thin flexible materials.</p> | CD-C |
| <p>Flashing A component, formed from a rigid or flexible <i>waterproof</i> material, that drains or deflects water back outside the <i>cladding system</i>.</p> | CD-E2 |
| <p>Flexible flashing tape A flexible self-adhesive <i>waterproof</i> tape. Usually used as an accessory for <i>building wraps</i>, to seal corners and intersections.</p> | CD-E2 |

Amend 11
Sep 2010

| Definition | Source |
|---|-----------------------------------|
| Flexible flashing tape A flexible self-adhesive <i>waterproof</i> tape. Usually used as an accessory for <i>wall underlays</i> to seal corners and intersections | Simple House |
| Flood level rim The top edge at which water can overflow from equipment or a <i>fixture</i> . | CD-G12 |
| Floor area , in relation to a <i>building</i> , means the <i>floor area</i> (expressed in square metres) of all interior spaces used for activities normally associated with domestic living. | Code |
| Floor waste An outlet located at the low point of a graded floor or in a level floor designed to receive accidental or intentional discharges. | CD-E3, CD-G13 |
| Floor waste gully A disconnecter gully for installation inside a <i>building</i> , for use with a floor grating or waste outlet fitting on a riser pipe and with provision, where required, for connection of waste pipes for <i>sanitary fixtures</i> . | Simple House |
| Floor waste pipe A pipe that receives the discharge from a <i>floor waste</i> and that discharges outside the <i>building</i> or to the <i>foul water</i> drainage or sanitary <i>plumbing system</i> . | CD-G13 |
| Flue The passage through which the products of combustion are conveyed to the outside. | CD-B1, CD-B2, CD-C, CD-G4, CD-G11 |
| Flue liner Pipes or linings of <i>fire</i> clay, metal or <i>fire</i> brick, surrounding <i>flues</i> . | CD-C |
| Flue system A series of interconnecting <i>flue</i> pipe casings which form a safe passage (<i>flue</i>) for conveying products of combustion from within an appliance to the outside of a <i>building</i> or structure. | CD-C |
| Flush-finished The description of a <i>cladding</i> and joints system which relies on a protective coating applied to the face of the <i>cladding</i> to prevent the penetration of water. | CD-E2 |
| Foamed plastics <i>Combustible</i> foamed plastic polymeric materials of low density (typically less than 100 kg/m ³) and are classified as cellular polymers which are manufactured by creating a multitude of fine voids (typically 90 to 98%) distributed more or less uniformly throughout the product. Examples of <i>foamed plastics</i> are latex foams, polyethylene foams, polyvinyl chloride foams, expanded or extruded polystyrene foams, phenolic foams, ureaformaldehyde foams, polyurethane foams and polychloropene foams. | CD-C |
| COMMENT: | |
| 1. <i>Foamed plastics</i> may be rigid or flexible, but rigid foams are the most common in <i>building</i> products. When burnt they tend to generate high levels of heat energy (kJ/kg) and varying quantities of smoke and other toxic gases depending on the nature and volume of the particular product. | |
| 2. Where doubt exists as to whether a <i>building</i> material is <i>foamed plastics</i> , an opinion should be sought from a <i>person</i> or organisation with appropriate skill and experience in <i>fire</i> engineering. That opinion should be included with the <i>building consent</i> application to the <i>building consent authority</i> . | |
| Footing That portion of a <i>foundation</i> bearing on the ground and any adjoining portion that is reinforced so as to resist the bearing forces. | Simple House |

- (i) In the case of liquefied petroleum gas, that are downstream of the first regulator beyond that container; or
- (ii) In the case of any other gas or where there is no such regulator (in the case of liquefied petroleum gas), that are downstream of the outlet valve of the container:
- (c) The work of fixing or unfixing the whole or part of the control system of any gas appliance—
but does not include—
- (d) Work on any gas storage container, including its fixing or unfixing; or
- (e) Work on any gas transmission system or distribution system; or
- (f) Work on any pipes or fittings supplied with liquefied petroleum gas from any gas storage container or containers that contains, or together contain, less than 15 kilograms net weight of liquefied petroleum gas; or
- (g) Work in any circumstances where the exclusions in section 3(2) of the Gas Act 1992 apply:]”

Gather That part of a *chimney* where the transition from *fireplace* to stack occurs.

CD-B1

Good ground means any soil or rock capable of permanently withstanding an ultimate bearing pressure of 300 kPa (i.e. an allowable bearing pressure of 100 kPa using a *factor of safety* of 3.0), but excludes:

CD-B1

- (a) Potentially compressible ground such as topsoil, soft soils such as clay which can be moulded easily in the fingers, and uncompacted loose gravel which contains obvious voids,
- (b) Expansive soils being those that have a liquid limit of more than 50% when tested in accordance with NZS 4402 Test 2.2, and a linear shrinkage of more than 15% when tested, from the liquid limit, in accordance with NZS 4402 Test 2.6, and
- (c) Any ground which could foreseeably experience movement of 25 mm or greater for any reason including one or a combination of: land instability, ground creep, subsidence, seasonal swelling and shrinking, frost heave, changing ground water level, erosion, dissolution of soil in water, and effects of tree roots.

COMMENT:

Soils (excepting those described in (a), (b) and (c) above) tested with a dynamic cone penetrometer in accordance with NZS 4402 Test 6.5.2, shall be acceptable as *good ground* for *building* foundations if penetration resistance is no less than:

- (a) 3 blows per 75 mm at depths no greater than the footing width.
- (b) 2 blows per 75 mm at depths greater than the footing width.

Depths shall be measured from the underside of the proposed footing.

| | |
|--|----------------------------|
| <p>Gross floor area The area contained within the outside face of the exterior timber wall <i>framing</i> of a <i>simple house</i>.</p> | <p>Simple House</p> |
|--|----------------------------|

| | |
|--|----------------------------|
| <p>Ground level See cleared ground level, finished ground level.</p> | <p>Simple House</p> |
|--|----------------------------|

| | |
|---|--------------------|
| <p>Group sleeping area A <i>firecell</i> containing communal sleeping accommodation for a specified number of people who may or may not be known to one another. Partial subdivision within the <i>firecell</i> is permitted with specific limitation including that no <i>occupied space</i> is fully enclosed and all <i>occupied spaces</i> are open and available to all occupants at any time. A <i>group sleeping area firecell</i> may include spaces for associated direct support functions, such as hygiene facilities and tea making (not cooking) activities, for use by the occupants. It does not include spaces, such as waiting rooms, lounges, dining rooms or kitchens, providing a communal service function for all occupants.</p> | <p>CD-C</p> |
|---|--------------------|

COMMENT:

1. Examples of *group sleeping area firecells* are dormitories, hospital wards, *wharehenui*, backpacker hostels and ski lodges.
2. The maximum number of people permitted in a *group sleeping area firecell*, and the permitted form of subdivision, will depend on the ability of the occupants to react to the presence of *fire* and escape to a *safe place*.

| H | |
| Habitable space A space used for activities normally associated with domestic living, but excludes any bathroom, laundry, water closet, pantry, walk-in wardrobe, corridor, hallway, lobby, clothes-drying room, or other space of a specialised nature occupied neither frequently nor for extended periods. | Code |
| Handrail A rail to provide support to, or assist with the movement of a <i>person</i> . | Code |
| Hazardous Creating an unreasonable risk to people of bodily injury or deterioration of health. | Code |
| Hazardous substance Has the meaning given to it by section 2 of the Fire Service Act 1975 and section 2 of the Hazardous Substances and New Organisms Act 1996 | Code/FSA/ HSNOA |
| Section 2 of the Fire Service Act 1975 states: | |
| “ Hazardous substance ” means | |
| (a) Any hazardous substance as defined in section 2 of the Hazardous Substances and New Organisms Act 1996; and | |
| (b) Any infectious or radioactive substance that may impair human, animal, or plant” health: | |
| Section 2 of the Hazardous Substances and New Organisms Act 1996 states: | |
| “ Hazardous substance ” means, unless expressly provided otherwise by regulations, any substance— | |
| (a) With one or more of the following intrinsic properties: | |
| (i) Explosiveness: | |
| (ii) Flammability: | |
| (iii) A capacity to oxidise | |
| (iv) Corrosiveness: | |
| (v) Toxicity (including chronic toxicity | |
| (vi) Ecotoxicity, with or without bioaccumulation; or | |
| (b) Which on contact with air or water (other than air or water where the temperature or pressure has been artificially increased or decreased) generates a substance with any one or more of the properties specified in paragraph (a) of this definition.” | |
| Hearth The insulating floor under the <i>fire</i> and in front and at the sides of the <i>fireplace</i> . | CD-B1, CD-C |
| Heating degrees , in relation to a location and a <i>heating month</i> , means the degrees obtained by subtracting from a base temperature of 14°C the mean (calculated using the <i>approved temperature data</i>) of the outdoor temperatures at that location during that month. | Code |
| Heating degrees total , in relation to a location and a year, means whichever is the greater of the following: | Code |
| (a) the value of 12 and | |
| (b) the sum of all the <i>heating degrees</i> (calculated using the <i>approved temperature data</i>) for all of the <i>heating months</i> of the year. | |

| Definition | Source |
|--|----------------------------------|
| <p>Heating energy, in relation to a <i>building</i>, means the energy from a <i>network utility operator</i> or a depletable resource (expressed in kilowatt-hours, and calculated using the Building Research Association of New Zealand's <i>ALF 3, The 'Annual Loss Factor' Method, A design tool for energy efficient houses</i> (3rd edition, April 2000) or some other method that can be correlated with that manual) needed to maintain the <i>building</i> at all times within a year at a constant internal temperature under the following standard conditions:</p> <ul style="list-style-type: none"> (a) a continuous temperature of 20°C throughout the <i>building</i> (b) an air change rate of 1 change per hour or the actual air leakage rate, whichever is the greater (c) a heat emission contribution arising from internal heat sources for any period in the year of 1000 kilowatt-hours for the first 50 m² of <i>floor area</i>, and 10 kilowatt-hours for every additional square metre of <i>floor area</i> (d) no allowance for— <ul style="list-style-type: none"> (i) carpets or (ii) blinds, curtains, or drapes, on windows (e) windows to have a shading coefficient of 0.6 (made up of 0.8 for windows and recesses and 0.75 for site shading). | <p>Code</p> |
| <p>Heating month, in relation to a location, means a month in which a base temperature of 14°C is greater than the mean (calculated using the <i>approved temperature data</i>) of the outdoor temperatures at that location during that month.</p> | <p>Code</p> |
| <p>Hem A flat fold, not completely closed, applied to the edge of a metal <i>flashing</i>.</p> | <p>CD-E2</p> |
| <p>Hidden gutter A gutter located within the boundaries of the roof <i>framing</i>. <i>Hidden gutters</i> may also be known as secret gutters or internal gutters. See also <i>Valley gutters</i>.</p> | <p>CD-E2</p> |
| <p>COMMENT: <i>Hidden gutters</i> are distinct from gutters or spouting that are externally located beyond the bounds of the roof and wall <i>framing</i>.</p> | |
| <p>Hoarding A structure alongside a public way providing side protection but no overhead protection.</p> | <p>CD-F5</p> |
| <p>Hold-open device A device which holds a <i>smoke control door</i> or <i>fire door</i> open during normal use, but is released by deactivating the device by an automatic <i>fire</i> detection system, allowing the door to close automatically under the action of a self-closing device.</p> | <p>CD-C, CD-F7, CD-F8</p> |
| <p>Hook An open fold applied to the edge of a metal <i>flashing</i>.</p> | <p>CD-E2</p> |
| <p>COMMENT: A <i>hook</i> is distinct from a <i>hem</i>, as it is open at an acute angle rather than flattened.</p> | |

|--|----------------------|
| Household unit | BA04 |
| (a) means a <i>building</i> or group of <i>buildings</i> , or part of a <i>building</i> or group of <i>buildings</i> , that is— (i) used, or intended to be used, only or mainly for residential purposes; and (ii) occupied, or intended to be occupied, exclusively as the home or residence of not more than 1 household; but (b) does not include a hostel, boarding house, or other specialised accommodation. | |
| Household unit For a <i>simple house</i> , means a <i>building</i> or part of a <i>building</i> that is used or intended to be used for residential purposes. | Simple House |
| HVAC An abbreviation for heating, ventilating and airconditioning. | CD-C, CD-F7 |
| HVAC system for the purposes of performance H1.3.6 and in relation to a building, means a mechanical, electrical, or other system for modifying air temperature, modifying air humidity, providing ventilation, or doing all or any of those things, in a space within the building. | Code |
| I | |
| Illuminance The luminous flux falling onto a unit area of surface. | Code |
| Impact insulation class (IIC) A single number rating derived from measured values of normalized impact sound pressure levels in accordance with Method ASTM E 492, Annex A1, Laboratory Measurement of Impact Sound Transmission Through Floor-Ceiling Assemblies Using the Tapping Machine. It provides an estimate of the impact sound insulating performance of a floor-ceiling assembly. | Code |
| Impervious That which does not allow the passage of moisture. | Code |
| Independent qualified person (IQP) means a <i>person</i> accepted by a <i>territorial authority</i> in accordance with section 438 of the <i>Building Act 2004</i> as being qualified to carry out the inspection, maintenance, and reporting procedures required for a <i>specified system</i> stated in a <i>compliance schedule</i> . | HB |
| Inspection chamber A chamber with working space at ground level through which the <i>drain</i> passes either as an open channel or as a pipe incorporating an <i>inspection point</i> . | CD-E1, CD-G13 |
| Inspection point A removable cap at <i>drain</i> level through which access may be made for cleaning and inspecting the drainage system. | CD-E1, CD-G13 |
| Insulating material A material that has a thermal conductivity of less than 0.07 W/mK. | CD-C, CD-E3 |
| Insulation In the context of <i>fire</i> protection, the time in minutes for which a prototype specimen of a <i>fire separation</i> , when subjected to the <i>standard test</i> for <i>fire</i> resistance, has limited the transmission of heat through the specimen. | Code |

|---|----------------------------------|
| O | |
| <p>Occupant load The greatest number of people likely to occupy a particular space within a <i>building</i>. It is determined by:</p> <p>(a) Multiplying the number of people per m² (occupant density) for the activity being undertaken, by the total floor area, or</p> <p>(b) For sleeping areas, counting the number of beds, or</p> <p>(c) For fixed seating areas, counting the number of seats.</p> | <p>CD-C, CD-F6, CD-F7</p> |
| <p>Occupied space Any space within a <i>building</i> in which a <i>person</i> will be present from time to time during the <i>intended use</i> of the <i>building</i>.</p> | <p>Code</p> |
| <p>Open path That part of an <i>escape route</i> (including <i>dead ends</i>) not protected by <i>fire</i> or <i>smoke separations</i>, and which terminates at a <i>final exit</i> or <i>exitway</i>.</p> | <p>Code</p> |
| <p>Open space includes land on which there is and will be no <i>buildings</i> and which has no roof over any part of it other than overhanging eaves.</p> | <p>CD-C</p> |
| <p>Open vented storage water heater A <i>water heater</i> incorporating a <i>vent pipe</i> which is permanently open to the atmosphere.</p> | <p>CD-G12</p> |
| <p>Other property—</p> <p>(a) means any land or <i>buildings</i>, or part of any land or <i>buildings</i>, that are—</p> <p style="margin-left: 20px;">(i) not held under the same <i>allotment</i>; or</p> <p style="margin-left: 20px;">(ii) not held under the same ownership; and</p> <p>(b) includes a road</p> | <p>BA04</p> |
| <p>Outdoor air Air as typically comprising by volume:</p> <p>(i) oxygen 20.94%</p> <p>(ii) carbon dioxide 0.03%</p> <p>(iii) nitrogen and other inert gases 79.03%.</p> | <p>Code</p> |
| <p>Outfall That part of the disposal system receiving <i>surface water</i> or <i>foul water</i> from the drainage system. For <i>foul water</i>, the <i>outfall</i> may include a <i>sewer</i> or a septic tank. For <i>surface water</i>, the <i>outfall</i> may include a natural water course, kerb and channel, or soakage system.</p> | <p>Code</p> |
| <p>Over-pressure protection Devices preventing the pressure in piping or appliances from exceeding a predetermined value.</p> | <p>CD-G11</p> |
| <p>Owner, in relation to land and any <i>buildings</i> on the land,—</p> <p>(a) means the <i>person</i> who—</p> <p style="margin-left: 20px;">(i) is entitled to the rack rent from the land; or</p> <p style="margin-left: 20px;">(ii) would be so entitled if the land were let to a tenant at a rack rent; and</p> <p>(b) includes—</p> <p style="margin-left: 20px;">(i) the <i>owner</i> of the fee simple of the land; and</p> <p style="margin-left: 20px;">(ii) any <i>person</i> who has agreed in writing, whether conditionally or unconditionally, to purchase the land or any leasehold estate or interest in the land or to take a lease of the land and who is bound by the agreement because the agreement is still in force.</p> | <p>BA04</p> |

| Definition | Source |
|---|-------------------|
| P | |
| Parallel flashing A roof <i>flashing</i> that runs along the roof slope, parallel to the roof <i>cladding</i> profile. Also known as a longitudinal <i>flashing</i> . | CD-E2 |
| Parapet A timber-framed wall that extends above the level of the roof <i>cladding</i> . | CD-E2 |
| Passive stack ventilator A system including a ventilation shaft which uses natural draught to ventilate spaces. | CD-G4 |
| Penetration A pipe, cable or duct passing through an opening in a <i>fire separation</i> . | CD-C |
| Penstocks are conduits to control the flow of water in water supply, hydroelectric power and sewerage systems. Penstocks are normally equipped with a gate system and surge tank. | DG |
| People with disabilities People whose ability to use <i>buildings</i> is affected by mental, physical, hearing or sight impairment. | Code |
| Performance criteria in relation to a <i>building</i> , means those qualitative or quantitative criteria that the <i>building</i> is required to satisfy in performing its <i>functional requirement</i> . | BA04 |
| Permanent opening An opening which cannot be closed, this implies that doors, windows etc are NOT permanent openings, although door undercuts are. | CD-G4 |
| Person includes the Crown, a corporation sole, and also a body of <i>persons</i> , whether corporate or unincorporated. | BA04 |
| Person with a disability means a <i>person</i> who has an impairment or a combination of impairments that limits the extent to which the <i>person</i> can engage in the activities, pursuits, and processes of everyday life, including, without limitation, any of the following: (a) a physical, sensory, neurological, or intellectual impairment: (b) a mental illness. | BA04 |
| Piping system An assembly of pipes, pipe fittings, gaskets, bolting and pipe supports. | CD-G14 |
| Pitch line The line joining the leading edge or <i>nosings</i> (if any) of successive stair treads within a single flight of <i>stairs</i> . | CD-F4 (Sep 07) |
| Plans and specifications— | BA04 |
| (a) means the drawings, specifications, and other documents according to which a <i>building</i> is proposed to be <i>constructed, altered, demolished, or removed</i> ; and | |
| (b) includes the proposed procedures for inspection during the <i>construction, alteration, demolition, or removal of a building</i> ; and | |
| (c) in the case of the <i>construction or alteration of a building</i> , also includes— | |
| (i) the <i>intended use of the building</i> ; and | |
| (ii) the <i>specified systems</i> that the applicant for <i>building consent</i> considers will be required to be included in a <i>compliance schedule</i> required under section 100; and | |

|--|---|-----------------|

The definition of 'Railway line' in the Transport Services Licensing Act 1989 has been repealed by the Railways Act 2005. Section 4 of the Railways Act 2005 now contains the definition for "railway line".

Section 4 states

"railway line" —

- (a) means a single rail or set of rails, having a gauge of 550 mm or greater between them, laid for the purposes of transporting people or goods by rail; and
- (b) includes—
 - (i) sleepers, associated formation and ballast, tunnels, and bridges; and
 - (ii) in relation to a single rail or set of rails that are laid on a road for the purposes of 1 or more light rail vehicles,—
 - (A) any area between the rails; and
 - (B) the area that extends 500 mm outside the extremity of any light rail vehicle being used on that single rail or set of rails; and
 - (iii) a set of rails, having a gauge of less than 550 mm between them, that is designated as a railway line in regulations made under section 59(l); and
 - (iv) except as provided in subparagraph (ii), any area within 5 m of a single rail or within 5 m of a line drawn midway between a set of rails; but
- (c) excludes—
 - (i) a railway line that is part of a railway used as an amusement device as defined in section 21A(1) of the Machinery Act 1950;
 - (ii) a railway line excluded by regulations made under section 59(m);
 - (iii) a railway line that exclusively serves private cable cars".

| Reflectance The ratio of the flux reflected from a surface to the flux incident on it. | CD-G7, CD-G8 |
| Regional authority means— (a) a <i>regional council</i> ; or (b) a <i>unitary authority</i> | BA04 |
| Regional council has the meaning given to it by section 5(1) of the Local Government Act 2002. | BA04 |
| Registrar has the meaning given to it by section 282 of the <i>Building Act 2004</i> . | BA04 |
| Regulations means regulations in force under the <i>Building Act 2004</i> . | BA04 |
| Regulator A device which automatically regulates the pressure or volume of gas passing through it to a predetermined level. | CD-G10, CD-G11 |
| Reinforcement Any form of reinforcing rod, bar or mesh that complies with the relevant requirements of NZS 3109. | Simple House |
| Relevant boundary means the <i>boundary</i> of an <i>allotment</i> which is <i>other property</i> in relation to the <i>building</i> concerned and from which is measured the separation between the <i>building</i> and that <i>other property</i> . For the <i>external wall</i> of any <i>building</i> , the <i>relevant boundary</i> shall be the nearest of the following <i>boundaries</i> : (a) A <i>boundary</i> of a freehold <i>allotment</i> , except that where the <i>other property</i> is a road, railway line or public <i>open space</i> the <i>relevant boundary</i> is the <i>boundary</i> on the far side of that <i>other property</i> . (b) A <i>boundary</i> of a cross-lease or of a company lease or licence, except that where the <i>other property</i> is <i>open space</i> to which the lessee or licensee of the <i>building</i> concerned has an exclusive right of access and occupation or to which two or more occupiers have rights of access and occupation the <i>relevant boundary</i> is the <i>boundary</i> on the far side of that <i>other property</i> . (c) A <i>boundary</i> shown on a unit plan excluding a <i>boundary</i> between a principal unit and its accessory unit, except that where the <i>other property</i> is <i>open space</i> which is common property, the <i>relevant boundary</i> is the <i>boundary</i> on the far side of that <i>other property</i> . | CD-C |

Amend 11
Sep 2010

| Definition | Source |
|---|--------------|
| COMMENT: | |
| <ol style="list-style-type: none"> Where an easement, such as a right of way, occurs within an <i>allotment</i>, the <i>relevant boundary</i> shall remain the same as if the easement did not exist. <i>Boundaries</i> within a cross-lease or company lease or licence are shown on a survey plan. In some cases the <i>boundary</i> is the <i>external wall</i> or roof of a <i>building</i>. The unit title <i>boundaries</i> of principal units, accessory units, and common property are shown in the unit plan. A <i>boundary</i> is frequently an internal or <i>external wall</i>, an upper floor, or the roof of a <i>building</i>. A wall along a <i>boundary</i> between two <i>allotments</i> is called a "party wall" when the <i>owners</i> of the <i>allotments</i> each have legal rights in respect of that wall registered by way of easements on one or both titles. An internal wall between cross-leases, company leases, or unit titles, or between one of them and common property, is not generally called a party wall but in that case also the lessees, unit title holders, or corporate body concerned each have legal rights in respect of that wall. Such a wall separates areas which are <i>other property</i> in relation to each other, but the wall itself is part of each property. The <i>fire</i> protection consequence of that legal concept is that such a wall can be regarded as a <i>fire separation</i> providing protection against horizontal <i>fire</i> spread in each direction. In other words, that wall may provide the appropriate <i>FRR</i> instead of each property having its own wall of that <i>FRR</i>. | |
| Relief vent A <i>vent pipe</i> which is connected to a <i>discharge stack</i> below the lowest branch connection and which connects at its upper end to the <i>discharge stack vent</i> or terminates as an open vent. | CD-G13 |
| Reservoir Body of water impounded by one or more <i>dams</i> or dikes, inclusive of its shores and banks and of any facility or installation necessary for its operation. | DG |
| Ribbon board Includes soffit plate . A horizontal <i>framing</i> timber secured to, or checked into, the edges of <i>studs</i> and supporting <i>eaves bearers</i> . | Simple House |
| Ridge beam A single beam that supports <i>rafters</i> of a <i>skillion roof</i> . | Simple House |
| Risk group A , for the purposes of performance F6.3.4 and performance F6.3.5, means <i>buildings</i> — | Code |
| (a) whose occupants are required to remain in the <i>building</i> until the main lighting system is restored; or | |
| (b) whose <i>evacuation time</i> is longer than 90 minutes. | |
| Risk group B , for the purposes of performance F6.3.4 and performance F6.3.5, means <i>buildings</i> — | Code |
| (a) whose <i>evacuation time</i> is 30 minutes or longer but not longer than 90 minutes; or | |
| (b) whose occupant load is more than 1 000. | |
| Risk group C , for the purposes of performance F6.3.4, means <i>buildings</i> not in <i>risk group A</i> or <i>risk group B</i> . | Code |
| Reservoir capacity Total or gross storage capacity of the <i>reservoir</i> at full supply level. | DG |
| Risk matrix A table that allows the calculation of a <i>risk score</i> by the allocation and summing of scores for a range of design and location factors applying to a specific <i>building</i> design. | CD-E2 |

It comprises one or more rooms for sleeping and may include spaces used for associated domestic activities such as hygiene and cooking.</p> | CD-C, CD-F7 |
| <p>COMMENT:</p> <ol style="list-style-type: none"> 1. Bed numbers are limited to 6 in <i>purpose groups</i> SC and SD or 12 in <i>purpose group</i> SA in accordance with C/AS1 Paragraphs 6.6.5 and 6.7.6. Examples may be found in hotels, motels and residential care facilities, such as old people's homes or in hospices providing temporary family accommodation. 2. It is assumed that the social cohesion of the occupants by virtue of the personal relationship (as family members, friends or associates) would ensure that any individual, becoming aware of <i>fire</i>, would naturally assist others within the <i>firecell</i> to escape. The term <i>suite</i> does not apply to a group of bedrooms where each room is available to different "key-holders". In some cases a <i>suite</i> may be a single bedroom. | |
| <p>Sump A chamber which is installed in the <i>drain</i> and incorporates features to intercept and retain silt, gravel and other debris.</p> | CD-E1 |
| <p>Supervise, in relation to <i>building work</i>, means provide control or direction and oversight of the <i>building work</i> to an extent that is sufficient to ensure that the <i>building work</i>—</p> <p>(a) is performed competently; and</p> <p>(b) complies with the <i>building consent</i> under which it is carried out.</p> | BA04 |
| <p>Amend 11 Sep 2010 Support span A clear distance along a member between supports, measured in plan (horizontally).</p> | Simple House |
| <p>Surface finish The combination of a surface coating and substrate material on surfaces of <i>building elements</i> exposed to view. It can be an applied decorative coating or the uncoated <i>building element</i> itself. For interior surfaces the requirements are evaluated in terms of <i>SFI</i> and <i>SDI</i>. For exterior surfaces the requirements are evaluated in terms of rate of heat release as determined by Appendix C, Paragraph C9.1.</p> | CD-C |
| <p>Surface water All naturally occurring water, other than sub-surface water, which results from rainfall on the site or water flowing onto the site, including that flowing from a <i>drain</i>, stream, river, lake or sea.</p> | Code |

| Definition | Source |
|---|-------------------------|
| T | |
| Tailing dam <i>Dam</i> constructed to retain tailings or other waste materials from mining or industrial operations. | DG |
| Tailpipe A device placed at the low point of a gas piping system to collect condensate, and from which the condensate may be removed. | CD-G10 |
| Territorial authority (TA) means a city council or district council named in Part 2 of Schedule 2 of the Local Government Act 2002; and— (a) in relation to land within the district of a <i>territorial authority</i> , or a <i>building</i> on or proposed to be built on any such land, means that <i>territorial authority</i> ; and (b) in relation to any part of a coastal marine area (within the meaning of the Resource Management Act 1991) that is not within the district of a <i>territorial authority</i> , or a <i>building</i> on or proposed to be built on any such part, means the <i>territorial authority</i> whose district is adjacent to that part. | BA04 |
| Territorial authority City or district council (as named in Schedule 2, Part 2 of the Local Government Act 2002) responsible for community wellbeing and development, environmental health and safety (including building control, civil defence, and environmental health matters), infrastructure (roading and transport, sewerage, water/stormwater), recreation and culture, and resource management including land use planning and development control. | Simple House |
| Theatre A place of assembly intended for the production and viewing of performing arts, and consisting of an auditorium and stage with provision for raising and suspending stage scenery above and clear of the working area. | CD-C, CD-F4 (Sep 07) |
| Thermal resistance The resistance to heat flow of a given component of a <i>building element</i> . It is equal to the air temperature difference (°C) needed to produce unit heat flux (W/m ²) through unit area (m ²) under steady conditions. The units are °Cm ² /W. | Code |
| Threshold A sill to an external door, or the floor under an internal door. | CD-D1 |
| Tile batten See purlin . | Simple House |
| Top plate A plate placed over the top end of <i>studs</i> . | Simple House |
| Total thermal resistance The overall air-to-air <i>thermal resistance</i> across all components of a <i>building element</i> such as a wall, roof or floor. (This includes the surface resistances which may vary with environmental changes eg, temperature and humidity, but for most purposes can be regarded as having standard values as given in NZS 4214.) | CD-E3, CD-G5 |
| Total wall area , in relation to a <i>building</i> , means the sum (expressed in square metres) of the following: (a) the <i>wall area</i> of the <i>building</i> ; and (b) the area (expressed in square metres) of all vertical glazing in <i>external walls</i> of the <i>building</i> . | Code Simple House |

| Definition | Source |
|---|--------------|
| Town gas A manufactured gas. | CD-G11 |
| Toxic environment An environment that contains <i>contaminants</i> that can contaminate the water supply in concentrations greater than those included in the New Zealand Drinking Water Standard 1995. | CD-G12 |
| Trade means any trade, business, industry, profession, occupation, activity of commerce, or undertaking relating to— (a) the supply or acquisition of goods or services; or (b) the acquisition of <i>household units</i> or any interest in land. | BA04 |
| Transverse flashing A roof <i>flashing</i> that runs across the roof slope, at right angles to the roof <i>cladding</i> profile. | CD-E2 |
| Trap A chamber which is installed in the <i>drain</i> and incorporates features to intercept and retain floatable debris. | CD-E1 |
| Trapezoidal A type of profiled metal <i>cladding</i> with symmetrical or asymmetrical crests, with troughs between the crests. | CD-E2 |
| Travel distance The length of the <i>escape route</i> as a whole or the individual lengths of its parts, namely: (a) <i>Open paths</i> (b) <i>Protected paths</i> and (c) <i>Safe paths</i> . | Code |
| Trickle ventilator A controllable ventilation opening through the external envelope to the outside to provide background ventilation. | CD-G4 |
| Trimmer A member supporting the wall <i>framing</i> beneath, or over an opening in a <i>non-loadbearing wall</i> and carrying wind loads to the <i>trimmer studs</i> . | Simple House |
| Trimmer stud A <i>stud</i> located on the side of an opening. | Simple House |
| Trough profile A type of profiled metal <i>cladding</i> comprising vertical ribs with flat, or lightly profiled pans between the ribs. Also known as ribbed, secret fixed or tray profile. | CD-E2 |

| U | |
| Unisex facilities Facilities available for use by either sex. | CD-G1 |
| COMMENT: <i>Unisex facilities</i> may also be described as both gender facilities. | |
| Unitary authority has the meaning given to it by section 5(1) of the Local Government Act 2002. Section 5(1) states: “ unitary authority ” means a territorial authority that has the responsibilities, duties, and powers of a regional council conferred on it under— (a) the provisions of any Act; or (b) an Order in Council giving effect to a reorganisation scheme” | BA04/LGA |
| Universal access Where elements and spaces are accessible to and usable by people of all ages and abilities to the greatest extent possible. | Simple House |
| Unprotected area in relation to an <i>external wall</i> of a <i>building</i> means: (a) Any part of the <i>external wall</i> which has less than the required <i>FRR</i> . For example, a non <i>fire</i> rated window, door or other opening or sheet metal. (b) Any part of the <i>external wall</i> which has <i>combustible</i> material more than 1.0mm thick attached to or applied to its external face, whether for <i>cladding</i> or any other purpose. | Code |
| uPVC flashings uPVC <i>flashings</i> shall be a minimum of 0.75 mm thick and: (a) comply with the requirements of the following Clauses of AS/NZS 4256: Part 2: ii) Clause 9.2 Impact resistance iii) Clause 9.3 Tensile strength iv) Clause 9.4 Colourfastness and impact resistance following ultraviolet light exposure. (b) where exposed to the weather, shall also comply with Section 8 of AS/NZS 4256: Part 2. (c) have a finish colour with a reflectance of 40% or more, when measured in accordance with ASTM C1549 or ASTM E903. | Simple House |
| V | |
| Valley board A board laid to support a <i>valley gutter</i> . | Simple House |
| Valley gutter A gutter running down the valley formed by the intersection of two pitched roof surfaces. | CD-E2 |
| Valve vented storage water heater (unvented storage water heater) A <i>storage water heater</i> in which the required venting to the atmosphere is controlled by a valve. | CD-G12 |
| Vapour barrier Sheet material or coating having a low water-vapour transmission, and used to minimise water-vapour penetration in <i>buildings</i> . (<i>Vapour barriers</i> are sometimes referred to as <i>damp-proof membranes</i> .) | CD-B2 |

| Definition | Source |
|---|---------------|
| Vent line A pipe or tube which conveys gas to a safe place outside the <i>building</i> from a gas pressure <i>regulator</i> relief valve. | CD-G10 |
| Vent pipe A pipe for the purpose of protecting <i>water seals</i> that at its upper end is either open to the atmosphere or fitted with an <i>air admittance</i> valve and that at its lower end is connected to a <i>discharge pipe</i> . | CD-G13 |
| Verification Method means a method by which compliance with the <i>Building Code</i> may be verified. | BA04 |
| VSG Visual stress graded, refers to verified timber that is initially sorted visually in accordance with NZS 3603. See also MSG . | Simple House |
| W | |
| Wall area , in relation to a <i>building</i> , means the area (expressed in square metres) of internally-exposed <i>external walls</i> , including any door openings, of the <i>building</i> . | Code |
| Wall bracing element A section of wall that performs a <i>bracing</i> function. | Simple House |
| Wall underlay An absorbent synthetic wrap used as part of the <i>wall cladding system</i> to assist the control of moisture by ensuring moisture which may occasionally penetrate the <i>wall cladding</i> is directed back to the exterior of the <i>building</i> . | Simple House |
| The <i>wall underlay</i> shall have the properties in Table 23 of the <i>Acceptable Solution E2/AS1</i> for Building Code Clause E2 External Moisture: | |
| (a) absorbency – no requirement | |
| (b) vapour resistance 7 MN s/g or less | |
| (c) water resistance of 20 mm or greater | |
| (d) pH of extract of between 6.0 and 9.0 | |
| (e) shrinkage no more than 0.5% | |
| (f) mechanical edge tear and tensile strength to AS/NZS 4200. | |
| Waste pipe A <i>discharge pipe</i> that conveys the discharge from <i>waste water fixtures</i> to a <i>gully trap</i> . | CD-G13 |
| Waste water fixture A <i>sanitary fixture</i> or <i>sanitary appliance</i> used to receive wastes, and which is not a <i>soil fixture</i> . | CD-G13 |
| Water heater A device for heating water. | CD-B2, CD-G12 |
| Water main A water supply pipe that is under the control, or maintained by a <i>network utility operator</i> . | Code |
| Waterproof and waterproofing The complete and total resistance of a <i>building element</i> to the ingress of any moisture. | CD-E2 |
| Water seal The depth of water that can be retained in a <i>water trap</i> . | CD-G2, CD-G13 |

| Definition | Source |
|---|----------------------|
| <p>Water supply system Pipes, fittings and tanks used or intended to be used for the storage and reticulation of water from a <i>water main</i> or other water source to <i>sanitary fixtures</i>, <i>sanitary appliances</i> and fittings within a <i>building</i>.</p> | Code |
| <p>Water tank (vessel) A covered fixed container for storing hot or cold water.</p> | CD-G12 |
| <p>Water trap A fitting designed to retain a depth of water that prevents foul air and gases escaping from the <i>plumbing system</i> or <i>foul water drainage system</i> and entering a <i>building</i>.</p> | CD-G2, CD-G13 |
| <p>Weathertightness and weathertight Terms used to describe the resistance of a <i>building</i> to the weather. <i>Weathertightness</i> is a state where water is prevented from entering and accumulating behind the <i>cladding</i> in amounts that can cause undue dampness or damage to the <i>building elements</i>.</p> | CD-E2 |
| <p>COMMENT: The term <i>weathertightness</i> is not necessarily the same as <i>waterproof</i>. However, a <i>weathertight building</i>, even under severe weather conditions, is expected to limit moisture ingress to inconsequential amounts, insufficient to cause undue dampness inside <i>buildings</i> and damage to <i>building elements</i>. Moisture that may occasionally enter is able to harmlessly escape or evaporate.</p> | |
| <p>Weathertightness and weathertight Terms used to describe the resistance of a <i>building</i> to the weather.</p> | Simple House |
| <p>Wet area An area within a <i>building</i> supplied with water from a water supply system including bathrooms and showers, laundries, sanitary compartments and kitchen areas.</p> | Simple House |
| <p>Wetwall The exterior <i>cladding</i> on a wall with a <i>drained cavity</i>.</p> | CD-E2 |
| <p>Wharenui A communal meeting house having a large open floor area used for both assembly and sleeping in the traditional Maori manner.</p> | CD-C, CD-H1 |
| <p>Wind zone Categorisation of wind force experienced on a particular site as determined in NZS 3604, Section 5.</p> | CD-E2 |
| <p>COMMENT: Maximum ultimate limit state speeds are: Low <i>wind zone</i> = wind speed of 32 m/s Medium <i>wind zone</i> = wind speed of 37 m/s High <i>wind zone</i> = wind speed of 44 m/s Very high <i>wind zone</i> = wind speed of 50 m/s. <i>Specific design</i> is required for wind speeds greater than 50 m/s.</p> | |
| <p>Wire dog Galvanised or stainless steel wire, D or Z shaped nail, spiked at each end. Used for fixing timber together to resist uplift</p> | Simple House |
| <p>Working day means any day except—</p> <p>(a) Saturday, Sunday, Good Friday, Easter Monday, Anzac Day, the Sovereign's Birthday, Labour Day, and Waitangi Day; and</p> <p>(b) the day observed in the appropriate area as the anniversary of the province of which the area forms a part; and</p> <p>(c) a day in the period beginning on 20 December in any year and ending with the close of 10 January in the following year.</p> | BA04 |
