

Dear Customer

Please find enclosed Amendment 5, effective 14 February 2014, to the Acceptable Solution and Verification Method for Clause G11 Gas as an Energy Source of the New Zealand Building Code. The previous amendment to G11 (Amendment 4) was in September 2010.

## **Acceptable Solutions and Verification Methods**

For New Zealand Building Code Clause  
**G11 Gas as an Energy Source**

**G11**  
BUILDING CODE

## Status of Verification Methods and Acceptable Solutions

Verification Methods and Acceptable Solutions are prepared by the Ministry of Business, Innovation and Employment in accordance with section 22 of the Building Act 2004. Verification Methods and Acceptable Solutions are for use in establishing compliance with the New Zealand Building Code.

A person who complies with a Verification Method or Acceptable Solution will be treated as having complied with the provisions of the Building Code to which the Verification Method or Acceptable Solution relates. However, using a Verification Method or Acceptable Solution is only one method of complying with the Building Code. There may be alternative ways to comply.

Users should make themselves familiar with the preface to the New Zealand Building Code Handbook, which describes the status of Verification Methods and Acceptable Solutions and explains alternative methods of achieving compliance.

Defined words (italicised in the text) and classified uses are explained in Clauses A1 and A2 of the Building Code and in the Definitions at the start of this document.

Enquiries about the content of this document should be directed to:

## Document Status

The most recent version of this document (Amendment 5), as detailed in the Document History, is approved by the Chief Executive of the Ministry of Business, Innovation and Employment. It is effective from 14 February 2014 and supersedes all previous versions of this document.

The previous version of this document (Amendment 4) will cease to have effect on 14 August 2014.

People using this document should check for amendments on a regular basis. The Ministry of Business, Innovation and Employment may amend any part of any Verification Method or Acceptable Solution at any time. Up-to-date versions of Verification Methods and Acceptable Solutions are available from [www.dbh.govt.nz](http://www.dbh.govt.nz)

# References

For the purposes of New Zealand Building Code compliance, the acceptable New Zealand and other Standards, and other documents referred to in this Verification Method and Acceptable Solution (primary reference documents) shall be the editions, along with their specific amendments, listed below. Where the primary reference documents refer to other Standards or other documents (secondary reference documents), which in turn may also refer to other Standards or other documents, and so on (lower order reference documents), then the applicable version of these secondary and lower order reference documents shall be the version in effect at the date this Verification Method and Acceptable Solution were published.

# Definitions

Amend 3  
Jun 2007

This is an abbreviated list of definitions for words or terms particularly relevant to this Verification Method and Acceptable Solution. The definitions for any other italicised words may be found in the New Zealand Building Code Handbook.

Amend 5  
Feb 2014

**Adequate** *Adequate* to achieve the objectives of the *building code*.

Amend 3  
Jun 2007

**Building** has the meaning ascribed to it by Sections 8 and 9 of the Building Act 2004.

**Contaminant** has the meaning ascribed to it by the Resource Management Act 1991.

Amend 3  
Jun 2007

**Escape route** A continuous unobstructed route from any *occupied space* in a *building* to a *final exit* to enable occupants to reach a *safe place*, and shall comprise one or more of the following *open paths*, *protected paths* and *safe paths*.

**COMMENT:**

Doors are not obstructions in an *escape route* provided they comply with C/AS1–C/AS7 and D1/AS1.

Amend 5  
Feb 2014

**Flame safeguard system** A system consisting of a flame detector(s) plus associated circuitry, integral components, valves and interlocks the function of which is to shut off the fuel supply to the burner(s) in the event of ignition failure or flame failure.

**Flue** The passage through which the products of combustion are conveyed to the outside air.

**Intended use** in relation to a *building*:

- a) includes any or all of the following:
  - i) Any reasonably foreseeable occasional other use that is not incompatible with the *intended use*; and
  - ii) Normal maintenance; and
  - iii) Activities taken in response to *fire* or any other reasonably foreseeable emergency
- b) but does not include any other maintenance and repairs or rebuilding.

Amend 3  
Jun 2007

**Lock-out** The safety shut down condition of the control system such that re-start cannot be accomplished without manual resetting.

**Over-pressure protection** Devices preventing the pressure in piping or appliances from exceeding a predetermined value.

**Regulator** A device which automatically regulates the pressure or volume of the gas passing through it to a predetermined level.

**Safe path** That part of an *exitway* which is protected from the effects of *fire* by *fire separations*, *external walls*, or by distance when exposed to open air.

Amend 3  
Jun 2007

**Town gas** A manufactured gas.

# Acceptable Solution G11/AS1

Amends  
3 and 5

This Acceptable Solution relates essentially to gas appliances. It should be read in conjunction with G10/AS1, which deals with piping reticulation.

## 1.0 Pipe Sizing

### 1.1 Pressure ranges

**1.1.1** Pipes shall be sized to maintain the pressure at any appliance inlet, when all appliances are in use, at no less than:

- 0.75 kPa for *town gas*,
- 1.13 kPa for natural gas, or
- 2.75 kPa for LPG.

### 1.2 Pressures less than 1.5 kPa

**1.2.1** Where the meter outlet pressure does not exceed 1.5 kPa, and when all appliances on the supply are operating, the pressure drop between the meter outlet (or *regulator* outlet if no meter is installed), and any appliance, shall be no more than 0.075 kPa for either *town gas* or natural gas.

**1.2.2** Acceptable methods for sizing pipes are given in AS/NZS 5601.1, section 5.2 and Appendix F.

### 1.3 Pressures greater than 1.5kPa

**1.3.1** Where the meter outlet pressure exceeds 1.5 kPa, and when all appliances on the supply are operating, the maximum pressure drop between the meter outlet (or *regulator* outlet if no meter is installed), and any appliance, shall be no more than 10% of the operating pressure.

**1.3.2** Acceptable methods for sizing pipes are given in AS/NZS 5601.1, section 5.2 and Appendix F.

## 1.4 Flow velocities

**1.4.1** Flow velocities shall be no more than:

- a) 45 metres per second for supplies filtered to give a 5 micron maximum particle size.
- b) 20 metres per second for unfiltered supplies.

### COMMENT:

The lower flow velocity for unfiltered supplies is necessary to protect the *regulator* from abrasive wear by any impurities.

Amend 3  
Jun 2007

## 2.0 Pressure Regulation

### 2.1 Regulators

**2.1.1** *Regulators* shall be fitted to the supply pipe when:

- a) Any appliance in the *building* is not fitted with its own *regulator*, and the supply pressure can exceed:
  - 1.5 kPa for *town gas* and natural gas, or
  - 3.5 kPa for LPG.
- b) Appliance *regulators* are fitted to all appliances but the supply pressure may exceed the maximum rated inlet pressure of any appliance *regulator*.

## 3.0 Over-pressure Protection

### 3.1 Safety devices

**3.1.1** *Over-pressure protection* shall be fitted if an appliance *regulator* inlet pressure exceeds 7 kPa or where:

- a) The *regulator* inlet pressure exceeds the pressure rating of downstream equipment, or
- b) The *regulator* outlet pressure is less than 70% of the inlet pressure.

Amend 5  
Feb 2014Amend 3  
Jun 2007Amend 5  
Feb 2014

**3.1.2** The *over-pressure protection* device shall limit the pressure downstream of the *regulator* to:

- a) No greater than the rated working pressure of the downstream equipment, and
- b) No greater than 35% above the normal operating pressure.

#### 4.0 Pipework Installation

**4.0.1** G10/AS1 Piped Services is an acceptable solution for the installation of pipework to supply gas as an energy source.

#### 5.0 Flues

##### 5.1 Flue materials

**5.0.1** Materials for *flues* shall comply with AS/NZS 5601.1, section 6.7.

##### 5.2 Safety devices

**5.2.1** Where flueing is dependent on the operation of an extractor fan:

- a) A safety device shall be fitted to prevent the flow of gas to the burner if insufficient draught is provided, and
- b) Appliances connected to the *flue* shall be fitted with a *safety shut-off system*.

##### 5.3 Fire dampers

**5.3.1** Automatic fire dampers fitted to combustion air ducts shall be interlocked with the gas supply to the appliance, in a way that shuts off that supply when the damper is closed.

#### 6.0 Automatic Extinguishers

**6.0.1** Appliances installed beneath automatic fire extinguishers that could, when operating, extinguish the appliance flame, shall be provided with:

- a) A 100% shut-off *flame safeguard system*, or
- b) Systems which shut-off and *lock-out* the gas supply system when the automatic extinguisher operates.

#### 7.0 Protection of Supply

##### 7.1 Gas contamination

**7.1.1** One of the following types of protective device shall be fitted to prevent air, oxygen or other gases from entering the gas supply systems:

- a) Non-return valves.
- b) Three-way valves that completely close one side before opening the other.
- c) Reverse flow detectors that control positive shut-off valves.
- d) Normally closed air-activated positive shut-off pressure *regulators* (e.g. zero *regulator*).
- e) A *flame safeguard system*.

**7.1.2** Protective devices shall be installed as close as possible to the point at which *contaminants* could be introduced.

**7.1.3** Gas and air combustion mixers incorporating double diaphragm zero *regulators* require no further protection against gas contamination unless directly connected to air, oxygen or other standby gases which operate at pressures above 7 kPa.

##### 7.2 Low pressure

**7.2.1** Protection against dangerously low pressures generated at the meter by the operation of equipment, such as gas compressors or gas engines shall be achieved by the installation of a suitable *lock-out* protective device between the meter and the equipment.

**7.2.2** Mechanically or electrically operated diaphragm low pressure shut-off valves with a manual reset are acceptable.

Amends  
3 and 5

## 8.0 Gas Meter Location

.....

**8.0.1** Gas meters shall not be located in:

- a) A liftwell or lift machine room,
- b) A space containing electrical switch gear,
- c) Vertical *safe path* or riser ducts, or
- d) A position that obstructs *escape routes* in the event of an emergency. (See NZBC C2 for other *escape routes* requirements.)

Amend 3  
Jun 2007

## 9.0 Another Acceptable Solution

.....

Amend 5  
Feb 2014

**9.0.1** AS/NZS 5601.1, Sections 1, 3, 4, 5, 6 and Appendices A–M is another Acceptable Solution to Paragraphs 1.0 to 8.0.

Amend 2  
Feb 1998
